Little Tree Farms

Framingham Center, Massachusetts

Pleasant Street

Landscape and General Offices

The Home of the "GARDEN BEAUTIFUL"

When you start for Little Tree Farms put an old rug in the car. You are sure to want to take home something for the garden or grounds.

Our Office Building, pictured on the cover. Come in and discuss your plans for the home grounds with one of our landscape men.

Or park your car near the little Wayside Shop and stroll about the Show Ground and gardens. Everything for the garden and grounds is there, and people to answer your questions.

We are really the "Home of the Garden Beautiful." Flowers, vines, flowering shrubs, evergreens, shade trees, garden furniture, bird baths and arches are all here for you. And better still, each thing is shown in its right

As you pass through Framingham Centre look for the many examples of colonial architecture, especially the Town Hall. It is a charming town.

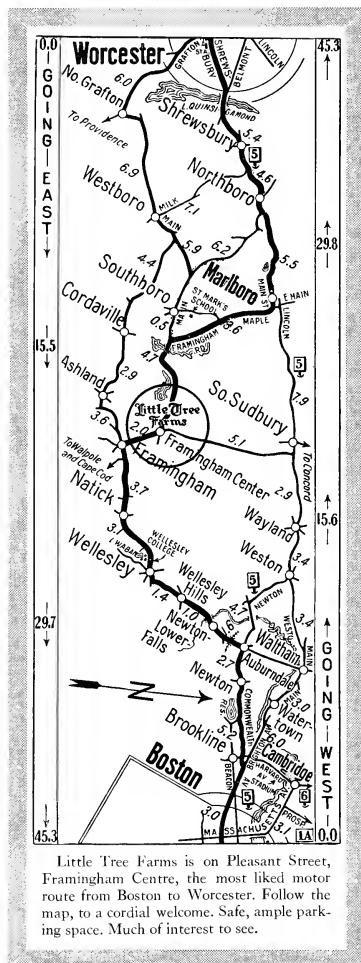

We are on Pleasant Street, just beyond the railroad tracks. You can't mistake the place you see on the cover, or the acres of little trees lining the "pleasant" street. Drive in and park your car.

Our towering pines are a Framingham landmark, as they arch darkly over the gay orange and green which are Little Tree Farms colors. They give distinction to our gardens and fertile fields.

Little Tree Farms is on Pleasant Street, Framingham Centre, the most liked motor route from Boston to Worcester. Follow the map, to a cordial welcome. Safe, ample parking space. Much of interest to see.

setting. To go through the Show Ground with one of our landscape men is to take a free lesson in decorative planting. Don't miss the hedged gardens of roses and perennials.

Little Tree Farms

AMERICAN FORESTRY COMPANY

FRAMINGHAM CENTRE, MASSACHUSETTS

BEAUTY AROUND THE HOME

was achieved by the man who owns this house as easily as one buys a suit of clothes, and with far more pleasure. Here is the story:

EVERY Spring and Fall, all Summer, and well into the Winter, our Little Tree Farms Show Ground is a sort of Mecca for people who love trees and flowers.

One April day, two very pleasant people from Wellesley left their car in the parking space you see on the cover, and began to stroll about the Show Ground with one of our landscape men. They especially enjoyed the young evergreens, just brightening for spring.

"I wonder if your firm could fix up our house something like this?" said Mr. Visitor, gesturing toward the planting around the Wayside Shop. "I don't know just what we ought to have, but I like the effect of these plantings. Do you do that sort of thing?"

"Oh yes," said the Landscape Man, smiling, "That is what we do most of. What type of house have you?"

"We brought a couple of snap-shots," said Mrs. Visitor, producing them from the ever-useful and beautiful beaded bag all ladies carry.

The photographs showed the house you see above, but in the undressed state of the other house pictured on the next page. One picture was a "close up" showing the exact details of windows, pillars and doors; the other was taken from the sidewalk, showing distances.

"I suppose the first thing is to cover up that bare cellar wall, isn't it?" said Mrs. Visitor.

"Yes," said the Landscape Man, "a suitable foundation planting will add a lot to the charm of your house."

"But," said Mr. Visitor, "I don't want to spend a great deal this spring. To be frank, I don't want to spend much over a hundred and fifty dollars. I suppose you send a man over to look at the place and make a plan; and all that costs?"

"Yes," said the Landscape Man, "but for a simple problem like yours, we can often settle the whole thing here. How long is your house front?"

In a moment the two men were tracing diagrams in the sandy path, and taking measurements.

In a few minutes more, the Landscape Man had made a rough outline sketch on the photograph, and a few calculations on his writing pad.

Then he said, "Here is what we could give you, all planted by our own men, for about \$150.00. We should put two little groups like this at the front door, Mrs. Visitor." As he spoke he pointed out a fascinating group of evergreens. "For the tall parts and bare walls, we would set a group like this," moving on to another group.

So he went on, showing the way the curves would run, illustrating foreground and background, identifying the plants, etc.

"The planting is mine; I leave it all to you," said Mr. Visitor.

But the Landscape Man shook his head. "We would rather have you see the written list first," he said. So he sent a list of the plants next day, made out as an order. Mr. Visitor sent it back signed.

Then the evergreens were dug, put on a truck and delivered. The Landscape Man went over with our planters to lay out the design, and in a bit of a while, behold Mr. Visitor's house as it appears above!

And it cost him just one happy afternoon in the country, plus \$150.00.

That is one kind of landscape service that "goes with" our Show Ground. You see the plants, choose your effects, get exact prices, and order with 100 per cent chance of getting what you get. Then, if you wish, we plant for you at reasonable prices and under intelligent supervision.

**Before
and After**

The case was reversed in the above instance. Another of our landscape men visited the owner of this house, and at his request, made a recommendation, a sketch and a price. The busy owner, not feeling very learned in plant lore, accepted the scheme without going into details. So the planting was made by our men, as planned. And the lower picture shows the result. The owner likes it; don't you?

This kind of landscape service; i.e., a visit, study of your property, a recommendation with instructions for plantings, is charged for. We keep the charge down to a minimum, however, not making elaborately drawn plans, unless you specifically order them, but giving you simply a practical working sketch-plan. Or if we are to carry out the planting, perhaps just a rough sketch that gives you the idea.

It does "pay to pay for" a visit and study, if you have an exceptionally beautiful or large property, or one in any way difficult to treat. Our terms are very gladly given upon request, by mail or telephone. Our landscape men and planters have carried out a great many beautiful home-plantings—everything from a simple hedge to the formal gardens of an imposing estate. You may rely on our service.

**FOUNDATION
PLANTING**
For fifty-foot front
\$115.00

6 Arborvitae	TTT *B&B	3 to 4 ft.
4 White Spruce	TTT B&B	2 to 3 ft.
4 Douglas Fir	TTT B&B	2 to 3 ft.
4 Blue Colorado		
Spruce	TTT B&B	2 to 3 ft.
4 Silver Fir	TTT B&B	18 to 24 in.
4 Sweet Azalea	TTT B&B	18 to 24 in.
4 Mountain		
Laurel	TTT B&B	12 to 18 in.
10 Box Sandmyrtle	TTT B&B	12 to 18 in.

(Regular Price \$130.50)

This collection of beautiful Little Tree Farms evergreens and flowering plants will decorate a fifty-foot front similar to that in the picture. Plant the first three species in the offer at the back; the next three in the middle and foreground. Use the last two for "edging."

It makes a richly blended planting.

Plants carefully packed and delivered to the transportation companies, Framingham, Mass.

Please order by name and number

You may rely on Little Tree Farms Service

If your house is as bare as this, and you want it to look as this one did after planting (look below), just take advantage of our Year Book Landscape Service: Order the Special Offer O-2, which you will find at the lower left of the page.

This offer covers a fifty-foot front, both sides of the steps; it is a little more varied than the one pictured, but of very similar effect. It was designed by the man who designed "Mr. Visitor's" house, and is charming. The plants in the picture had two years of growth before the photograph was taken. In less than two years your O-2 planting will look as if it had always been there.

With this offer and all the others you will find on these pages, we know you can make use of our facilities to decorate and protect your home grounds, according to your taste.

We hope you will enjoy doing so.

Now we know, from years of experience, that many of our customers have simple problems of decorative planting which they would love to solve by a visit to our Pleasant Street Show Grounds,—if they lived near enough. But they live, maybe, in Poughkeepsie or Orange or—shall we say Pinehurst? They can't spend the afternoon at Little Tree Farms, much as we would like to have them.

Are you one of these distant friends?

Well, we have tried to bring the Show Ground and the Landscape Man to you. In this Year Book we have photographed plants clearly, and labelled them for you; we have designed suitable groups at varying prices for typical situations, and we show you just how they look, planted. Our pictures and our explanations are the patient, sincere labor of our landscape department, and are made with the one aim of giving you a service satisfactory, pleasant, and profitable to us both.

So this Year Book is our Landscape Service to all our friends who can not come to see us. All the resources of the big attractive place pictured on the front and back covers of this book are concentrated here in a service of ideas and materials with which you can make your home more homelike.

[†]The number of T's designates the number of times transplanted.

"*B&B" means shipped with roots in a ball of burlap-tied earth.

Our Little Tree Farms Arborvitae especially grown for potting, are among the most used evergreens for front door decoration. 3 ft., \$4.00

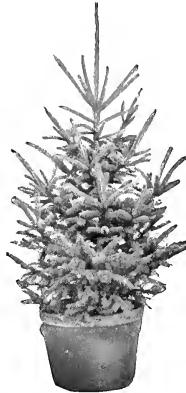

The very latest fashion in front door decoration is potted evergreens in addition to the planted ones

ON the preceding page, we have made you a special offer (O-2) for a fifty-foot front foundation planting. But perhaps you are only interested just now in decorating your main doorway with its steps. A good doorway group is really a decoration for the whole house, just as a graceful door is the "making" of many a building.

So our Landscape Department has designed the group below for you, photographed from our freshly dug plants, placed as you will plant them for best effect.

This is the Doorway Group offered you at the right for only \$18.00

Our Little Tree Farms Spruces, especially grown for potting, are much liked on door steps. See Blue Spruce page 38, and White Spruce page 35

The brick house above was sold again a few years after our planting. Its value had increased, much as is described in the following letter from another customer:

Your folder came to me this morning at the post-office. I have been thinking about having some good trees. I might interrupt right here to say that I believe I sold my other home largely on the effect produced by trees and shrubs which I purchased from you several years ago. The trees were set out by myself with only a maul and a spade. The effect produced by the trees in question for planting AFTER planting and did all wrong; yet those lovely trees are the envy of many people, perfect in shape and a never ceasing joy. I offered to buy every other one of a hedge back from the purchaser of the house, but he said he thought more of those trees every time he looked at them.

**Offer
No 3**

**GROUP FOR
DOORWAY
\$18.00**

1 Arborvitie	TTT	*B&B	3 to 4 ft.
1 Blue Colorado Spruce	TTT	B&B	2 to 3 ft.
2 White Spruce	TTT	B&B	2 to 3 ft.
2 Ground Juniper	TTT	B&B	12 to 18 in.

(Regular Price \$19.50)

This is an especially beautiful group of evergreens, as the picture clearly shows. They deserve the main attention to your home with dignity and charm. Buy two of the offers for both sides of the door, and plant as shown here. The Blue Colorado Spruce and the two Ground Juniper are in front, the Arborvitie is in the center, and the wall space is highest; the White Spruce between.

This group is well fitted for several other situations; it can be used in any recess of architecture; at a path corner; on the lawn. A very fine group.

You will find this offer again pictured on page 5, demonstrating how to make a foundation planting in this group. Other suggestions include windows, house corners. These suggestions are a part of our Year Book Landscape Service to you, and we hope they will help you to enjoy your planting.

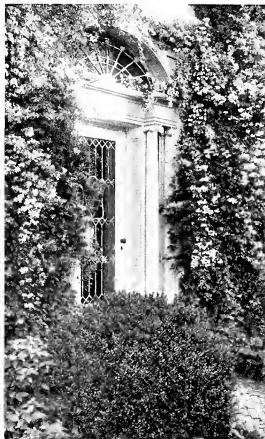

These evergreens, all three times transplanted, with burlap-wrapped balls of earth on their fine roots, are well packed and delivered free to the transportation companies, Framingham, Mass.

Remittance with order

Please order by name and number

† The number of T's shows number of times transplanted.

* "B&B" shipped with roots in a ball of burlap-tied earth.

For Clematis and Box see pages 63 and 59

Details of Decoration

Before we leave the consideration of doorways we must mention the vine-clad type. For a summer home or a Southern home, you may want little decoration beyond a flowering vine on each side of the door. The one above has Clematis, given an Old World setting by the clipped Box tree in front. Such simple but picturesque designing is always within reach at most moderate cost. You will find flowering vines described on page 63, and Box on page 59. For northerly climates, however, better substitute a nicely trimmed Arborvitae (page 47), or a fat little Mugho Pine (page 42) for the Box.

Of course you want your doorway design to harmonize with all the rest of the house planting. It should not differ in idea from the foundation planting, but should be the climax of it, the center and focus. In all the suggestions we give, you will find this principle exemplified.

This snap-shot shows the window detail of a house belonging to one of our customers. It illustrates the new fashion of supplementing planted evergreens by the use of evergreens in pots and boxes

The window box, a feature of most attractive houses nowadays, adds more to the effect than seems credible in so small a detail. It is charming from within and from without

The window details also must be kept in harmony with the base planting, as to material and general effect. If the door has been decorated with potted evergreens in addition to a planting, it is customary to add window boxes to the planting near the windows. Note, also, that one keeps the planting of a low-growing character under the window, following the horizontal line of the window box.

Suitable evergreens for window boxes are Arborvitae, Blue Spruce, White Spruce and Taxus. Look for small sizes under these species.

But if you can drive out to Little Tree Farms, just bring your boxes with you, and we will plant the evergreens in them for you.

The picture below shows how we design plantings to correct, modify or heighten an architectural effect, as the need may be.

Here was a charming house of modest size, with a big hospitable porch that everybody liked

to come to, and a great wide flight of steps which invited a sojourn.

But the steps were so very wide that they were like a gaping mouth; you really couldn't see anything else. Also, the slope of the land made a rather high bare wall of the porch front.

See how our landscape man narrowed down the steps, in effect, by bringing out a broad curve of planting to meet the narrow path in two definite points, hiding the step-corners. And notice the soft mass of tall Red Pines which immediately covered the high wall.

We can do things like this to meet any type of problem you submit to us. The adaptability of plant material is almost limitless, and our experience is extensive.

Come out and decide on your planting with us. Or sit down with this Year Book and decide with us, that way. We will do our best to give you beauty and comfort, and fun in getting it.

This design of our Landscape Department was carried out with our Hemlocks, Red Pines, Mugho Pines, Arborvitae, Mountain Laurel, and a sprinkling of perennials from our perennial garden

Potted Arborvitæ and Spruce

How to plant the house corner is shown at the right. Our planters set the tall Juniper (page 32) at the corner and passed gradually down to the lowest level under the window with Silver Fir and Arborvitae

The planting at the left is simple but effective. You will obtain much the same effect by using the three offers below in combination. This particular design has Mugho Pine in the center group, which you may prefer

A Standard Planting

We put in this photograph of one of our foundation plantings to show you the space covered and general effect produced by using the three offers below, combined.

Together they plant from the front door to the house corner, *one side*, of a house like this. This design is a part of our Year Book Landscape Service to you. And if you can't come out to the Show Ground we hope you will avail yourself of this, or one of the other suggestions. Even if you do come you can not choose any finer, handsomer plants. It is nice to see them growing, but can't you "almost" see them growing from the photographs?

Offer No. 4 DOORWAY GROUP \$18.00

- 1 Arborvitae fttt *B&B 3 to 4 ft.
 - 1 Blue Colorado
 - Spruce ttt B&B 2 to 3 ft.
 - 2 White Spruce ttt B&B 2 to 3 ft.
 - 2 Ground Juniper ttt B&B 12 to 18 in.
- (Regular Price \$19.50)

This, the same as Offer O-3, combines as here shown to make a pretty, economical foundation planting.

Please order by name and number

Offer No. 5 CENTER GROUP \$12.00

- 1 White Spruce fttt *B&B 3 to 4 ft.
 - 1 Douglas Fir ttt B&B 2 to 3 ft.
 - 1 Arborvitae ttt B&B 2 to 3 ft.
 - 1 Ground Juniper ttt B&B 18 to 24 in.
- (Regular Price \$12.75)

These three offers, total cost \$48.00, will decorate one side of a small house front, as suggested above. Buy two sets for the whole front, both sides of door. These choice ornamental evergreens are delivered free to the transportation companies, Framingham, Mass.

Remittance with order

Please order by name and number

Special Note:

By ordering these three groups at the same time you may have them at the special price of \$46.00.

May we show you here a few extracts from letters about our service?

"I received the evergreens in perfect condition and am indeed greatly pleased with them. They surely improve our house. I feel that we should have the center group to complete the picture, so I am enclosing a check for two center groups and \$10.00 for the evergreens pictured on back of catalogue."

"The trees and shrubs are fine looking, and the planting plan was such as to give the best effect. I am glad to say that we are very much pleased and we shall be happy to speak favorably of Little Tree Farms whenever there is opportunity."

"We are very much pleased with the size and quality of the trees and thank you for the selection made."

Offer No. 6 CORNER GROUP \$18.00

- 1 Arborvitae fttt *B&B 3 to 4 ft.
 - 2 Douglas Fir ttt B&B 18 to 24 in.
 - 1 Blue Colorado
 - Spruce ttt B&B 2 to 3 ft.
 - 2 Ground Juniper ttt B&B 12 to 18 in.
- (Regular Price \$19.50)

All plants of these offers are choice, three times transplanted; carefully packed with burlapped ball or root.

Please order by name and number

This charming place in the Chestnut Hill district has more extensive grounds and planting than the photograph shows. One of our landscape men called, by request, submitted a study for the various parts of the property, and upon the owner's approval, sent our plants and planters with a skilled supervisor to do the work

Individuality in Planting

If your home is as "different" as the one above, or your grounds as imposing as the one below, you will probably want marked individuality developed in the planting design. There are certain personal qualities, certain adjustments of material and line to the lines and material of the house; certain answers to the demands of environment, which can be achieved only by the concentrated effort of an artistic mind, working on the actual conditions. These are the results you get by employing an experienced Landscape Architect.

If you decide to employ our landscape department we will co-operate heartily with you in every way. Our terms are given upon request. If you decide to employ a private Landscape Architect, we shall be happy to co-operate with him to the best of our ability.

Whether you use our entire facilities, or merely buy our plants, we shall try to make the Little Tree Farms a lasting factor in the success of your home grounds.

Whether your home is large or small we have the right planting material for you, and the skilled experience which can give you results from the material

The result is truly appropriate and pleasant, isn't it? We have no hesitation in calling your attention to the high quality of the plants as well as to the attractive placing and grouping of them. Please notice the beautiful Blue Spruces near the brick steps, and the fine Douglas Firs screening the brick wall

Stray words about our service:

From a letter:

"I am frank to say that I have tried out two or three companies in connection with this work and your estimates are not only more satisfactory but you seem to have grasped the idea much more in keeping with the lay of the land."

From a letter:

"I wish to acknowledge the superior service given us by your representative. He combined most happily business efficiency, personal interest and artistic ability."

From the "Florists Exchange," New York, May 5, 1923.

"Little Tree Farms, Framingham, Mass., under which name the nurseries of the American Forestry Company are known, have exhibited their products very successfully at the Home Beautiful Exposition in Mechanics Hall, Boston, where its charming, appropriate plantings of decorative subjects around Hodgson's Portable Houses have attracted universal attention.

"A picture of quiet dignity was produced by the use of White Spruce, Mugo Pine, Blue Spruce, Firs, Cypress, Japanese and American Arborvitae, etc. The veranda and the sleeping porch, the entrance and the back yard, each had their appropriate setting, here and there, gay flowers lent a touch of color, set off by the lively green of the lawn. The Little Tree Farms exhibit has done more than any other to give real pleasure, combined with valuable information on a subject in which every visitor is interested."

Bring your plans and ideas, your questions and preferences to us at Little Tree Farms. If you can't, let this Year Book suggest the right choice to you

Here is the closely clipped, medium height hedge. If you use Privet you will get a height of four feet or so. If you wish the hedge lower, plant Japanese Barberry and keep it sheared. Prices page 60

Either the Privet or the Japanese Barberry will give you more color than the evergreen hedges—flowers in spring and berries in autumn. If you do your clipping after the flowering season you "save your cake and eat it too"

DECORATIVE HEDGES

WHY hedges? Because edges!

The edge of a lawn, where it meets the sidewalk is always a no-man's land. In winter when the snowplow swerves a bit from where the sidewalk seems to be, the lawn edge gets a fearsome trampling. In spring when puddles appear at intervals on the sidewalk, the lawn edge gets another "beating-up." All summer, bicycles and puppies dash in and out.

Really, you have to plant something there, or build a wall.

There are several ways to plant the lawn edges. But the simplest way,—the oldest fashion and now the newest, is to plant a hedge.

For a narrow lawn it is the only practical thing, and for all lawns bordering on busy streets it is the most practical thing.

A hedge can be high or low, as you may want a view or no view. It can be thick or narrow according to what you plant. It may be evergreen, deciduous or flowering, as you like it.

Children and posies thrive better if they are well "hedged in" from the streets. All the delicate and charming aspects of home intimacy are heightened by shelter

So, you see, a hedge is a very adaptable and obliging protector. The greatest country properties and the tiniest modern house, look well behind hedges.

Please order by name and number

(The number of T's designates the number of times transplanted.)

A hedge is always a protection, a neat finish, a real addition to the value and appearance of your home. And if you take thought with regard to the material and the treatment of your hedge, it can be made a wholly harmonious part of the decorative scheme; perhaps the most important part.

In the pictures and paragraphs, the offers on these few hedge pages, we try to show the different types of hedge you will want to know about; where the types fit best; and how to make them.

Let us begin with the familiar Privet hedge. (Prices of Privet on page 61.)

Iota Privet will make you a semi-formal or an informal hedge, not over four feet high, graceful in habit, fairly thick, very strong. It can be sheared to a very nice close oval, and is suited to use in situations like those pictured on this page.

Privet flowers prettily in spring, and carries heavy sprays of black-blue berries well into the winter. These can be saved only by pruning after blooming season.

This is a Little Tree Farms design; planned and planted by us; plants grown in our nurseries. The hedge of Arborvitae is still new, but already very satisfactory

This is a Japanese Barberry hedge, photographed not long after planted. (The entire planting of the little grounds was ours.) A Japanese Barberry hedge is well suited to suburban lawn edges, as it remains low, is extremely protective and very ornamental. Its spring coloring is lightest green, with tiny blossoms of pale yellow. Its leaves turn scarlet in autumn and it carries bright red berries all winter.

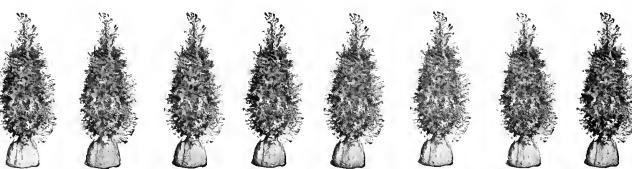

An evergreen hedge is just as appropriate next the sidewalk as Barberry, if you prefer it, as many do. The Arborvitae hedge on page 7, and this Hemlock hedge are equally attractive in their different styles. Hemlock (prices on page 50) is very soft and drooping, very graceful. Can be sheared to utmost symmetry.

Decorative Hedges—Continued

THE Arborvitae hedge is very much the mode now for edges next the street, and even more so as a hedge between properties or between parts of the same property. Not that Arborvitae hedges ever went out of fashion. But they were found chiefly on the highly landscaped estates and surrounding elaborate gardens. Just as taste in dress and houses has become a more general possession among us, so has taste in gardens and grounds. Consequently the best "furniture" for gardens and grounds is demanded and supplied. Arborvitae hedges are of the best,

Use them around gardens, between properties or edging the lawn.

The offer (O-8) below makes ten to eleven feet of extremely dense Arborvitae hedge of the very highest quality, so fine indeed that you have an immediate effect. It pays to set your hedge plants very close, and keep them severely cut back for a while, for this gives you permanent density near the ground. The pretty Arborvitae hedge pictured below is not planted so close, because height was wanted rather than density. See also the picture at the top of page 9.

Plant these wonderful Little Tree Farms Arborvitae about a foot and a half apart, following planting instructions given above. Remove burlap first, to free the splendid roots.

**Offer
No. 8**

Please order by name and number

*The number of T's designates the number of times transplanted.
**"B&B" means shipped with roots in a ball of burlap-tied earth.

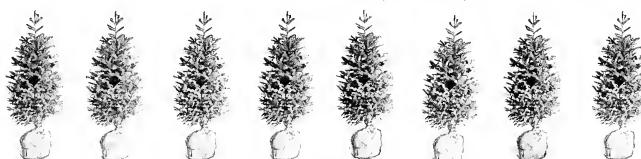

This aristocratic garden hedge of Arborvitae is made by planting the Little Tree Farms plants shown on the previous page, according to instructions. The attractive screening group of tall Arborvitae near the service ell is made by planting our large sizes, either of Arborvitae or Pyramidal Arborvitae. Priced on pages 47 and 48

Evergreen Hedges

If you want a hedge as permanent as Arborvitae, but wider, still more protective,—in short, if you want a more massive living wall, you may have a beautiful one in White Spruce.

Planted and sheared in the same way, White Spruce will give an equally aristocratic effect, but wholly different; its color will be slightly silvery, instead of dark green. Its width will be greater; it will take kindly to a square top; it will be stiff instead of soft. No enterprising beastie is going to break through your White Spruce hedge, be sure! See the massive one below.

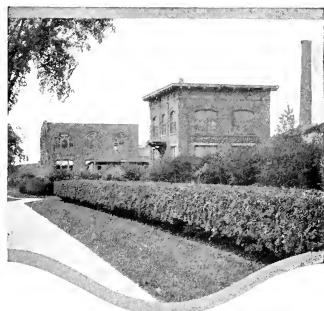

Hedge 10½ feet long

Build yourself a massive wall of living beauty in silver green tones with these Little Tree Farms White Spruce, ordering Offer O-9 at the right

A White Spruce hedge is appropriate in all the places where the Arborvitae is; but do not plant it where you want to keep the wall low. Its great function is protecting solidly up to a height of five or six feet.

A White Spruce hedge can be used along country property edges, or in very "dressy" situations alike, for by more or less exacting clipping, it is made to harmonize with either environment.

The perfect Little Tree Farms White Spruce shown below will grow fast and beautifully in a hedge for you. Come and see how they look, heading one of our gardens at the Show Ground.

Prosperous businesses are nowadays leaders in civic pride. Their grounds are well cared for. A solid, impenetrable, well-kept hedge is a fine choice.

Here a thick pine planting is added

Our White Spruce and Douglas Fir are both economical enough for business hedges. Shall we plant for you?

EVERGREENS IN THE GARDEN

If you love gardens, and especially if you delight in making every possible corner of your place yield some kind of garden beauty, make use of evergreens in combination with flowers and vines. In a corner where sunlight and soil are too meagre for a flower bed, a small evergreen group will thrive. And at its feet some shade-loving posies, or a bright "ground cover" vine will shelter itself cosily. If you have steps from one level to another, they can be the prettiest thing

on the place, nestling in varied evergreens and rock flowers.

Please use our service for your garden. Come to our Show Ground and talk with a maker of gardens there. Or look at the pictures here of what he does, and adopt from him such ideas as please you.

The evergreen group offered at the right makes a beautiful effect near stone steps or other rock work.

Come down
these steps

Into our Show Ground
We will welcome you

We will gladly build you an effect like this, or tell you how to do it. Come out and talk it over with us

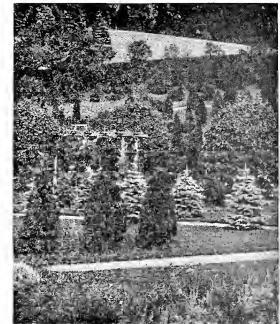

Everybody seems to enjoy lingering over our rock-work. People love the Ground Juniper, the Mugho Pine and the Euonymus vines peering out from below; the brilliant masses of flowering rock plants; the tall lily spikes.

For your Garden lover is never done with his garden. Do you not plan to move that clump of Peonies to the border next year and put Fox-glove in its place?

Don't you harbor thoughts of putting in a bird-bath, and stepping stones and a hedge? Of course! Or something else that will improve the garden.

For you, the busy dreamer of gardens, we suggest a "Garden of Baby Evergreens," i.e., a few rows of small choice evergreens placed in your garden. They cost very little, and rapidly increase in value and beauty.

Professional gardeners well know the value of a "Baby Evergreen" Garden. This and other great gardens benefit by it

They love the pointed Junipers, the occasional Red Pine, the joyous Mountain Laurel. And everybody carries home, or orders sent, some of these things for his own garden, carrying home, too, a mental plan for their use

A GARDEN OF "BABY EVERGREENS"

\$45.00

4 Balsam Fir	Twice transplanted	12 to 18 in.
4 Silver Fir	Twice transplanted	18 to 24 in.
4 Douglas Fir	Twice transplanted	18 to 24 in.
4 Engelmann Spruce	Once transplanted	8 to 12 in.
4 Blue Colorado Spruce	Twice transplanted	12 to 18 in.
4 Austrian Pine	Once transplanted	2 to 3 ft.
4 Arborvitae	Once transplanted	18 to 24 in.
4 Hemlock	Once transplanted	12 to 18 in.
4 Common Yucca	Thrice transplanted	12 to 18 in.
10 Japanese Pachysandra 4-year		6 to 8 in.

(Regular Price \$52.00)

Fifty perfect little evergreens for \$15.00. Carefully packed and delivered free to transportation companies, Framingham, Mass.

Remittance with order

Please order by name and number

These baby evergreens supply some of the material with which you can build and rebuild till you have the perfect garden.

Whenever you want to use one it is right at hand, ready to be moved in. There is no waiting and no further expense. Each year the trees add dollars to their value and inches to their stature. Studying them you acquire a rare touch in evergreen composition.

The "Baby Evergreens" make a fascinating garden in themselves. And when you replant them on lawn or in garden, they give you a double satisfaction.

A home path made lovely by flagstones and shrubbery

For such a formal path entrance, an evergreen group is most suitable. Offer O-12 below fits well here

A "wilderness path" created by planted evergreens and rock plants

BEAUTIFYING PATHS AND DRIVES

IN the joyous task of developing one's home grounds to a maximum of attractiveness and comfort, the paths and driveways, with all their junction-points, offer at once the greatest opportunities and keenest problems.

A big place is "made or marred" by the character of its drive entrance and the way the grounds look from that drive, especially as one arrives at the house. A small place makes its first impression by the trimness of the hedge or other planting that borders the sidewalk, and by the treatment of the paths, especially their outer and inner ends.

We have tried to make these two pages a help to you in the fascinating matter of paths and drives.

The charm of the path shown below is its edging of Pachysandra, backed by Ground Juniper. The pretty evergreen leaves of Pachysandra grow only a few inches tall and allow bulb-planting, so that Spring may find crocus and hyacinth beauties spangling the green carpet. Pachysandra is so nicely suited for path edging that we are offering a good quantity this year; plant it freely, it is inexpensive. Pachysandra is described and priced on page 59.

For a choice group of blended evergreens to use at the corner or turn of a path, either at the sidewalk or within the grounds, you will like the special Offer O-12 below. It has fine color contrast and variety of shape.

PATH ENTRANCE

\$11.00

1 Blue Colorado Spruce	†TTT	*B&B	2 to 3 ft.
1 Douglas Fir	TTT	B&B	18 to 24 in.
1 Juniper	TTT	B&B	2 to 3 ft.

The three beautiful plants shown below, carefully packed, with burlap-wrapped balls of earth at their roots, delivered free to the transportation companies at Framingham, Mass.

Remember with order:

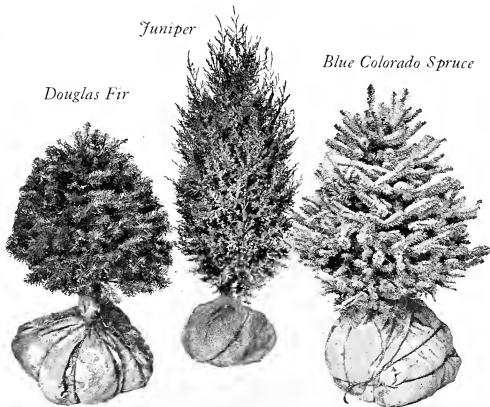

Please order by name and number

This "Path Entrance Group" suits lawn and garden also. The new "Friendship Offer" (see rear cover), also fits a path well.

Juniper

Douglas Fir

Blue Colorado Spruce

For such a path entrance, you may well use Offer O-12

The turn of the drive past the main house entrance is always an important decorative center. A group planting of some height and mass and considerable distinction is needed if the scale of the house is large. The group below is designed for such a situation

A drive planted with the classic columns of Lombardy Poplars

To Continue with Paths

We suggest that Junipers, Arborvitae and Pyramidal Arborvitae appear with equal charm in "naturalistic" paths like that on page 12, and at "dressy" path like this above. So, also, Mugho Pine, Ground Juniper, and Euonymus Vines. The flowering shrubs make delightful path plantings. Please consult pages 60 through 62.

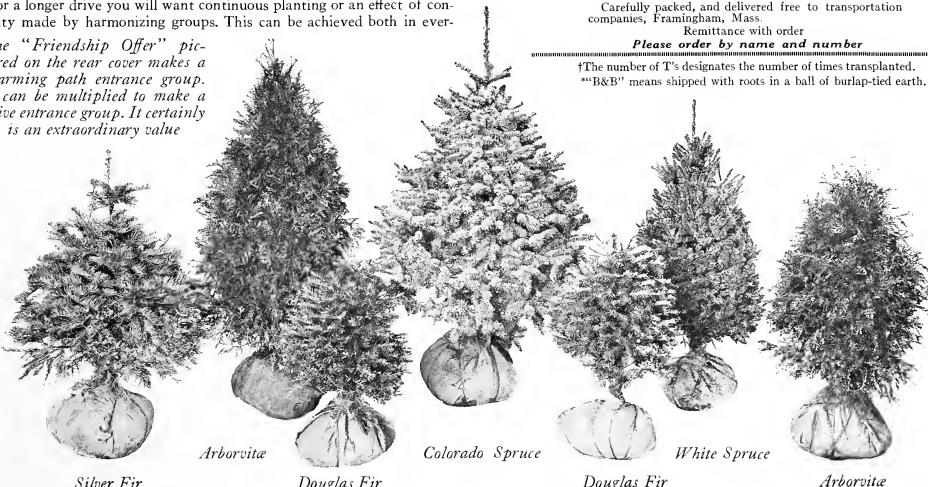

Our Show Grounds on Pleasant Street are rich in suggestive path plantings. You are cordially awaited there. A visit will add to your delight in manipulating your paths for beauty.

The Driveway is just a wide path, in spirit; either a formal or a naturalistic one. Its turns need larger plantings, and so do its entrance and terminus, but there is scope for every taste and type. If you have a long or noticeable drive, we shall be glad to study it with you for best results.

For a short drive you need only entrance planting and planting at the terminus; possibly also at the curve between. At your choice you may plant evergreen groups, as above; or hardwood trees, as a pair of Oaks or Maples or Ash. Or you may blend evergreens with flowering shrubs.

For a longer drive you will want continuous planting or an effect of continuity made by harmonizing groups. This can be achieved both in ever-

The "Friendship Offer" pictured on the rear cover makes a charming path entrance group. It can be multiplied to make a drive entrance group. It certainly is an extraordinary value

Arborvitae (page 47), Juniper (page 32), and masses of Laurel (page 59) make this border

Tall Spruces or Pines, faced by large shrubs, combine border and screen (pages 34-39; 40-46)

DECORATIVE BORDERS

BORDER planting is useful and beautiful in many situations; for example: To blend house and lawn, as above; to screen off the house from the lawn, as above, right; to enclose the lawns in "bays" or outdoor rooms, as lower left; to make a more wild and woods-flavored retreat, as lower right.

And always a border planting conduces to seclusion and happy outdoor living in the enjoyment of grass, flowers, shade, without the sense of being out in the public eye. The picture at the bottom of page 15, one of our plantings, well illustrates this result.

If you see here the type of border planting you would enjoy, we hope the method and material for making such a planting will be clear to you. It will help greatly if you can drive out to Framingham Centre and see our many model borders, and consult one of our landscape men.

Such an enclosure of planting, making a genuine outdoor room, is a delight in winter as well as in the open season

We shall be very glad to advise you as to details of border planting, and what type your grounds most need.

To aid those who are at a distance, we have designed an attractive border, and priced it on page 15 in a special offer, O-14.

Perhaps you have some good shade trees at the edges of your lawns. Let them be the top-story of the new border. If you want a rather formal effect, why not set a group of tall Arborvitae in front, around a garden seat, as shown in the view at the lower left corner? A Blue Spruce, a White Spruce or a Silver Fir will stand next; then a group of Douglas Fir. Now you will have built a little "bay" for bird bath and seat.

Clumps of Arborvitae and Juniper suit such little "bays" admirably; Laurel is also good. See Offers and illustrations under these species, pages 47, 32 and 59.

It is a rest and pleasure just to stroll about the grounds, when every little odd corner is full of such interest and beauty. Most restful of all is the sense of being unobserved

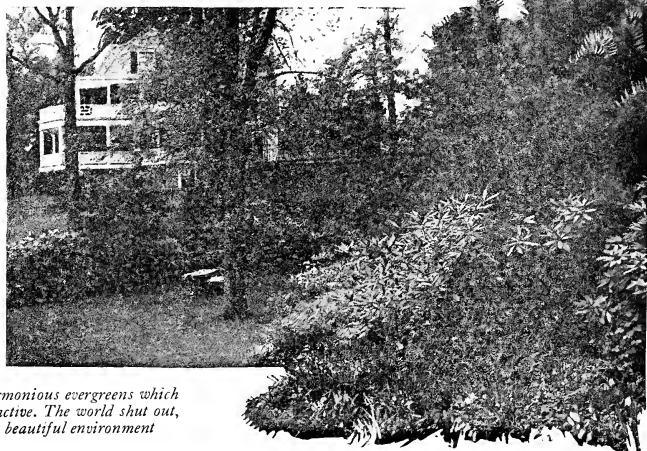

If you prefer a forest flavor for your border, under-plant the tall shade trees you have, with White Pines or Red Pines, or Douglas Fir. Bring the Pines or Firs out in curves, to make the desired recesses, or outdoor rooms. Then fringe these curves with Laurel or Rhododendron. Fringe these again with ferns, or Pachysandra, or lilies and rock plants. Our garden expert at the Show Ground will show you charming flowery-edge material if you ask him.

All these plants mentioned here are described and priced in the later pages of this Year Book.

We have far too little outdoor life around our houses in this country, but we are fast learning how to get it. The first step is to enclose our grounds so that we may sit, or play, or stroll outdoors without being observation.

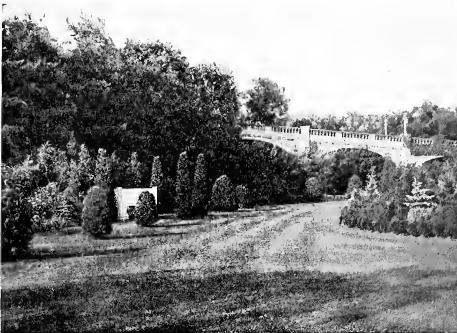

It is the plantings of beautiful, protective and harmonious evergreens which make these two lawns so comfortable and so attractive. The world shut out, family and friends can enjoy with you a truly beautiful environment

Both these border plantings are successful "screens," shutting out the sights and sounds of the "hard, high road." That at the left is more thickly massed, because the available space was narrow.

Blue Spruce, enlivening a background of Red Pine, White Pine, Douglas Fir and White Spruce. Prices further on in this Year Book

Border The briefest study of Border

Border Planting Planting shows that it is simply a way of building the walls of the outdoor home. It differs from a hedge only in height and design; the purpose is still to enclose the home space, to shut out troubling influences, and to enhance the beauty of what is within.

A hedge does this, within limited height, with trim regularity; the border planting, as tall as you design it, does the same thing in a naturalistic fashion—in bold lovely curves and colors. It gives you a sheltered, secluded feeling, safe from winds, from dust, from strangers' eyes.

And the border planting also gives an added grace, a heightened beauty to every single aspect of your outdoor life. The pretty gowns of women, the charming games of children, are still more charming against such an evergreen background. Tennis, tea, talk, all gain a zest from the becoming frame to their picture. Your garden and your lawn are twice lovely with such a background.

Yes, a good border planting is a very beautiful finish for one's grounds. And it is something you may have with ease and at no exorbitant cost. Little Tree Farms designs and plants are at your service.

To make such a border planting set tall White Pines or Red Pines in the background, tall shapely Arborvitæ grouped in front. An edge of little Globe Arborvitæ fronts Blue Spruce and Arborvitæ, opposite

If you like the blended evergreen border shown below, which we made two years ago for a customer, nothing can be simpler than to have one. Send for the offer beside the picture, O-14, and follow the planting map below, in setting out the evergreens. This offer will cover about 60 feet of boundary. Order as many units as you need.

If you want to vary the design, and hesitate to choose for yourself from the materials offered, do drive out to our Show Ground on Pleasant Street and talk with one of our men. There also you may see various appropriate garden furniture at reasonable prices.

O 14** EVERGREEN BORDER
Sixty feet long
\$65.00

6 Pines	TTT	*B&B	4 to 5 ft.
3 White Spruce	TTT	B&B	3 to 4 ft.
4 Douglas Fir	TTT	B&B	2 to 3 ft.
2 Arborvitæ	TTT	B&B	2 to 3 ft.
2 Colorado Spruce	TTT	B&B	2 to 3 ft.

(Regular Price \$67.50)

The planting plan given above the photograph at the right, shows you how to set your trees to get the effect shown in the picture. You will notice that the Pines hold the background, next the sidewalk, and that the brilliant tones of Colorado Spruce and White Spruce blend with the artistic Arborvitae on the lawn side of the border. Dig the holes deep and large; fill in with rich loam, if the soil is poor. Set the trees so that the rim of earth on their stems is a bit lower than the surface. The holes will be about six feet apart.

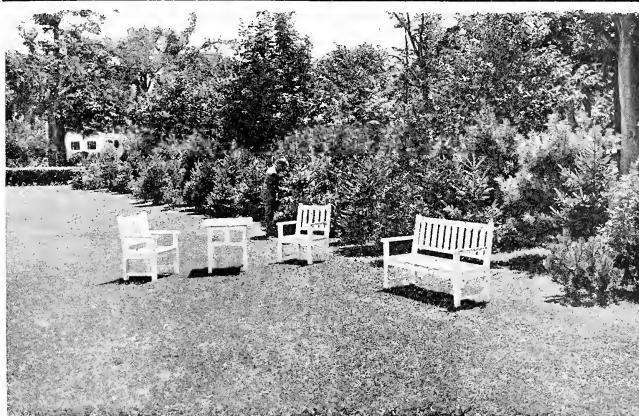

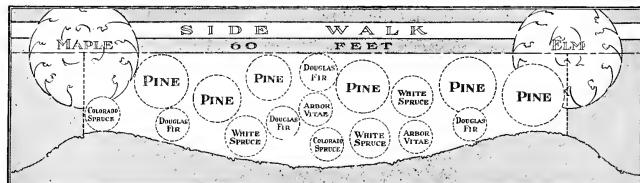

These superb evergreens are carefully packed and are delivered free to the transportation companies, Framingham, Mass.

*Retinospora, Juniper, Hemlock, Silver Fir
and a few flowering shrubs do this screen*

Spruces, Firs and Hemlock make a thick wall even if placed in a line, as narrow space demands

This group is very similar to the "Wall Screen," Offer O-16, next page

SCREENING AND DECORATING

ON these two pages we want to help you with one definite kind of planting which is a great aid to comfort, and if well done, a feature in the beauty of your grounds. Badly conceived, it becomes a blemish. We mean planting something to hide something else: a "screen planting."

All borders and hedges are by nature screens. But on small grounds and large alike, there are often places not connected with the border which simply cry out for a "screen." Perhaps the most usual of such places are the clothes yard and the garage. They need to be hidden because they are for service only; even if they are attractively built, they should not be prominent in the decorative scheme.

Equally desirable is it to hide what is too attractive, too intimate; as the relaxed family life of the sun porch. Hence the practice of planting evergreen groups when the drive draws near the sun room or living room windows.

We picture here three very successful screen plantings: At the top, a clothes-yard screen; below this, a screen for the sun room; at the bottom, a simple garage screen. Please notice, as you study them, that each is a natural part of a general planting scheme. The first is a continuation of a foundation planting around the house. The second is a part of the drive planting. The last is part of a simple border for the lawn. That is the usual method, and the best. Tie your needed screen to your other plantings by connecting them, or by making them harmonious in design.

So many of our friends and customers ask us how to plant a screen, that we are giving two "maps" on these two pages. These designs produce an attractive group-effect. It is also possible to plant a few scattered Pines or Spruces, not grouped, for a simple screen. See the garage below.

The Garage Screen offer, O-15, below, is equally applicable to any small building or object of similar size. The Spruces and Firs have height and body, and the colors are well blended.

Our largest White Pines, for such a screen in New England, are priced and pictured on pages 43, 44 and 45.

Our largest Red Pines for such a screen are priced on page 42; Austrian Pine, pages 40 and 41.

Utility Screens There are some places on your property where the simple straight line of trees is adequate for a screen. Such places are shown at the top of the page.

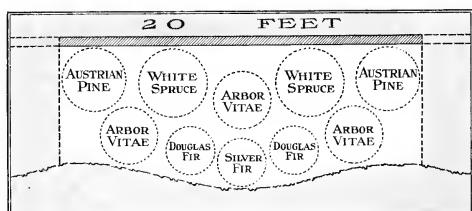

The vegetable garden: Nothing better to break the wind, and keep the man with the hoe out of view than a row or two rows of Pines,—White Pine or Red Pine. They make the nicest little garden path, and screen, and border, all in one. Let them grow to look like this. Or cut them back to a massive hedge if you prefer. A Pine hedge is shown on page 45.

The tennis court: A Pine screen does double duty, for it provides a resting shade and a windbreak, as well as a retreat. The "windless region" where games are best played is in the fragrant sheltering of the Pines. Plant a row next the wire netting, perhaps ten feet apart. Then "scatter" a few in front, to take off the stiff look and to add density. Such a playground is ideal.

At the right is a smaller-scale screen planting, acting as a windbreak for peonies and other flowers which can not endure strong winds. Juniper and Arborvitae groups are prominent in this. You can use these middle-size evergreens very nicely in your garden, at any windy corner where the flowers need protection without overshadowing. The Juniper and Arborvitae are both picturesque and utilitarian.

The attractive wall and planting shown below is a good type. Whether you have a wall or a fence or a trellis enclosing certain portions of your grounds, you may wish to plant a decorative evergreen bed along it; or an evergreen bed enlivened by touches of flowering shrubs and perennials. We offer you here a most attractive wall screen, with a map of the planting design, suited for such situations. Our Landscape Man has left it to you to add whatever "edging" you wish, if any. Mugho Pine, Ground Juniper, Euonymus, Globe Arborvitae, Taxus, and Mountain Andromeda are all good edging materials.

Plant the beautiful Pines, Firs, Spruces and Arborvitae of Offer O-16 (below) according to the map at the right, to make a dense, decorative wall screen twenty feet long.

† The number of T's designates the number of times transplanted.
* "B&B" means shipped with roots in a ball of burlap-tied earth.

For such a magnificent windbreak of White Spruce, plant as large size as you wish to afford of the White Spruce priced on page 35, about eight feet apart. Two rows are better than one. Norway Spruce, shown in the circle, is priced on page 39. Douglas Fir on pages 30 to 32

PROTECTION FROM WIND & WEATHER

BEHIND such a wall of Spruce as this "close-up" shows, the wind is most surely "tempered" to the cattle. All the buildings and yards of progressive stock farms are so protected, as a matter of dollars and cents. Better health for the stock, more comfort for the men results. And because it is the right thing, it looks right. No fine stock farm without its well planned windbreaks!

For such a windbreak you want, of course, strong trees that will not break easily in storm; fast growing trees; trees of great natural bulk and resistance; trees raised to sell at low cost.

Practically all our Spruces make good windbreaks; they are dense, bulky, resistant and tall. Of them we recommend Norway Spruce when rapid growth and cheapness are the first consideration. See prices, page 39.

For such an Arborvitae windbreak, plant a large size of the Arborvitae shown and priced on pages 47 and 48

1. The number of T's designates the number of times transplanted.

*"B&B" means shipped with roots in a ball of burlap-tied earth.

We recommend White Spruce for more ultimate value and beauty; it is the acme of robust resistance, size and good looks. Page 35.

We also recommend Douglas Fir for equally lasting beauty and service. It is darker green and of different texture. Choose from comparison which appeals to you. Prices page 30 thru 32.

A single-row windbreak of Spruce or Fir is set eight or ten feet between trees. But we often set the trees only four or five feet apart, thus "forcing" the fastest growth. Then we remove every second tree after a few years, to replant elsewhere. This gives good results.

For very severe situations it is better to plant more than one row of trees, not one tree in front of another, but between. Then you have ample protection.

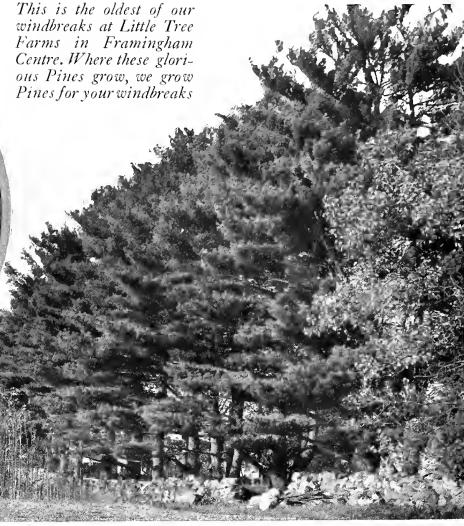

For all windbreaks, use our three times transplanted evergreens for quickest and surest results. Twice transplanted for less expense

These beautiful utility windbreaks are both of "White Pine for New England"

This is the oldest of our windbreaks at Little Tree Farms in Framingham Centre, Where these glorious Pines grow, we grow Pines for your windbreaks

Economy in Protection

The other great wind-break material is Pine. White Pine and Red Pine have been for generations favored by the farmer and the estate owner. You can see the character of Pines and that of Spruces perfectly in the large pictures that head these pages. The Spruces come closer to the ground; if you need protection especially close to the ground, plant Spruce or Fir; or plant Pine with Arborvitae or Spruce in front of it.

But for all usual situations White Pine for New England, and Red Pine elsewhere, are perfect windbreaks. Austrian Pine is often substituted for these on properties near the sea, or where the soil is unusually poor. Red Pine is grander and larger, but in some places Austrian Pine is the best solution for the problem.

A utility windbreak of Norway Spruce. With the offers and suggestions on these pages you can choose a protective planting of any type

O 19**

FOR THE EXPOSED PLACE

\$28.00

3 Austrian Pine	†TTT	*B&B	3 to 4 ft.
3 Douglas Fir	TTT	B&B	2 to 3 ft.
3 White Spruce	TTT	B&B	2 to 3 ft.

(Regular Price \$30.00)

See Offer O-20 for details.

Exposed to the driving spray and sea wind, thriving in spite of the shifting sandy soil, these Scotch Pines are doing a fine service. Scotch, Austrian, or Red Pine for such spots; they are all "old salts," as to wind

FOR DIFFICULT PLACES

Shady Places

For shaded areas we recommend, putting first those which endure most shade:

Douglas Fir	White Pine	Red Oak	Azalea
Hemlock	Austrian Pine	Swamp White Oak	Flowering Dogwood
Silver Fir	Juniper	Yellow Birch	Japanese Barberry
Balsam Fir	Ground Juniper	Great Laurel	Ibota Privet
Norway Spruce	Sugar Maple	Mountain Laurel	Witch Hazel
White Spruce	Norway Maple	Evergreen Bittersweet	
Arborvitae	European Linden		

By shade we mean not only such odd corners as pictured at the top of the page, but also all the pieces of land where you want to plant under tall shade trees or on the edges of thin woods, as at the left. This subject is treated under Douglas Fir, pages 30-32; and on the pages on Pines.

Exposed Places

In general, use the species recommended under "Wind-breaks," remembering that by the sea Scotch and Austrian and

Red Pine have extraordinary virtue. Offer O-19, at the left, is composed of very wind-hardy evergreen folk, regular "old-timers." Multiply this unit by as much as you need, for a wind-beaten area.

If your exposure is more to the rigors of winter, heavy snow and ice pressure, extreme cold, the Spruce and Firs are Nature's answer.

Barren Places

All trees thrive best in a deep, rich, porous soil, such as a sandy loam. But some evergreens and hardwoods have exceptional ability to draw sustenance from "poor" soils. For a barren soil, a heavy loam, or a stiff clay, try these:

Red Pine	Douglas Fir	Azalea	
White Pine	Silver Fir	Norway Maple	Red Oak
Austrian Pine	Juniper	Sugar Maple	Linden
Scotch Pine	Norway Spruce	Silver Maple	Elm

**Offer

* B&B means shipped with roots in a ball of burlap-tied earth.

A mile of sliding riverbank on a customer's property has become a forest margin by planting our White Pines. If the wind had been severe, Red Pines would have served

A Pine planting like this is equally good for any other steep bank, such as a railroad "cut," or barren hillside

Steep Places A steep bank is easily treated if it is not too near the house. Just mass it with Pines or Douglas Fir. But if it is a part of your decorative scheme treat it with variety of form and color. Two such situations are pictured here. At the right, the high walls of the steps are concealed, and the height of the bank lessened, by Hemlock, Pine and Blue Spruce, merging into the smaller evergreens: Mugho Pine, Ground Juniper, Retinospora. Then come vines and a touch of color in Hydrangea and Slender Deutzia.

Wet and Dry Places Certain trees are fitted by nature to endure a superabundance of either moisture or drought; they can be planted on both wet and dry soils, though like all others they thrive best on a well drained soil. These doubly enduring trees are:

Silver Fir	Austrian Pine	Sugar Maple	Linden
Douglas Fir	Arborvitae	Norway Maple	Red Oak
Norway Spruce	Juniper	Yellow Birch	Elm
White Pine		White Ash	

Besides these very tolerant creatures there are some which are especially useful for the "Extra Dry" spots, but not for wet areas. These faithful members of the Prohibition Party are:

Red Pine	Blue Spruce	Silver Maple	Japanese Barberry
Scotch Pine	Ground Juniper	Lombardy Poplar	Ibota Privet
Limber Pine	Mugho Pine	White Ash	

And then there are the good friends in adversity who can keep cheerful and healthy even in a spot that is quite too wet! For such a place plant these:

Balsam Fir	Red Maple	Flowering Dogwood
Hemlock	Swamp White Oak	Viburnums

Basswood
Basswood

The perfectly cultured, vigorous rows of Douglas Fir transplants shown above were photographed at Little Tree Farms No. 1, where the trees for quantity planting are raised,—the original "Birthplace of Little Trees that Live." The two husky little evergreens shown at the sides were dug from blocks of Arborvitae and Juniper there, to show you the kind of roots for which we have made a national reputation

Right Plants to Use

For successful growth under the natural conditions of wind and weather, out in the fields where you can't afford to take much care of them, trees for improvement plantings (forest plantings, so-called), must be magnificently rooted and grown, like those we show above.

This is the kind of plant you can afford to spend your enthusiasm and money on. They will grow steadily and fast, and make a handsome, valuable planting for you. Their like from Little Tree Farms are giving pleasure and profit to thousands of our customers, now.

The edges of a mass planting of Douglas Fir made about a decade ago. A handsome woods-border around the fields of a large property

Especially fine are the Douglas Firs we are offering for quantity planting. We can recommend them without qualification for "under planting," general forest planting, and planting on difficult soil. They grow fast and make a beautiful, valuable woods.

The Arborvitae offered are also very fine for underplanting, and for wet places. The Juniper makes an exquisite natural effect with other evergreens or alone. With it you can approximate the beauty of old New England pastures,—the latest mode in country estate landscaping. Juniper and Arborvitae in mass planting trick the eye into belief that all is natural.

Young Douglas Firs recently planted in forest fashion. Take them from the nursery block above and set them out; they will look like this in a brief time

Growing Trees

for the improvement of property, private and public, has always been our major specialty. Little Tree Farms trees are growing around public reservoirs, in city parks, on mountain sides and on outworn pastures, by the million, throughout the eastern part of this country. There are no better trees for private or public forest planting. And our prices are low as only very large production makes possible! While we have developed a very large and gratifying business in ornamental nursery stock, we still remain and expect to remain, "Headquarters for Little Trees for Big Plantations."

Attractive hard-woods, gleaming Birch or flaming Maple, or Mellow Ash add a note of natural loveliness to the evergreen forest

Your planted drive through the fields can be a vista, framed in picturesque evergreens

Follow the lead Nature has given. If you have Pines on the property, plant more; and so with all the other good trees

Beauty in Woods Planting

Nothing adds more style, and charm of a country property or a large suburban one, than artistic woods-planting. Beauty in woods planting begins when you make the most of every natural advantage. If you have a water margin of any kind, accentuate its flow-line; open views through to it, framed in picturesque groups. This is where the value of Junipers, Arborvitae, Birch, and other picturesque trees is felt. If you have a sunny slope, imitate the old pastures where Pine and Spruce are growing up among groups of tall and low Juniper.

The vigorous, splendidly rooted little Douglas Fir at the left is a sample of the block of Little Tree Farms Douglas Firs pictured on page 22. Such plants grow to be the massive and handsome trees shown in the planted forest border at right

Another most attractive type of forest planting is the forming of groups of hard-woods, making successive groves; a Maple Sugar grove, or belt; a Red Oak woods; an Ash forest; and so on.

If these groups are arranged along a winding drive through the fields, or along a brook, or a hillside, they provide a constantly shifting set of scenes to ride or walk through. Variety of color in spring and autumn, variety in size and shape are there; but all have solid value for wood and for future building possibilities. And such hardwood groves may be very beautifully used as a supplement to the evergreen forest, especially if that is of one or two species only.

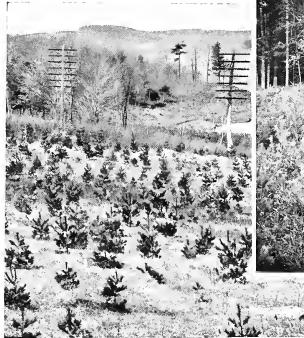

Little Tree Farms has men thoroughly experienced in designing and carrying out woods plantings. We shall be glad to help you in selecting or planting your trees.

*The number of T's designates the number of times transplanted.

B & B means shipped with roots in a ball of burlap-tied earth.

Prices include packing and delivery F. O. B. Framingham, Mass.

Here are the three stages of reforesting. These are all Little Tree Farms "Jobs," showing here the beginning

And here is the valuable young forest, the "stand of timber," which is also a beautiful woodland retreat

Here is the second stage. Our husky, hardy Pines grow 2 feet and over a year, quickly covering your barren acres with young timber

Quality and Economy

When you plant trees by the thousand or hundred you want species that will grow fast and steadily during a long life; that will be valuable in maturity, and beautiful at all stages. From our long experience and study of many countries we recommend the following materials for quantity planting, private or public.

The three great species for beautiful and valuable forests of long life are White Pine, Red Pine and Douglas Fir. (Ample described on pages 42 to 45, and 29 to 31.) They give you the finest basis for your esthetic forest, and the highest value in timber.

Plant any unused, bare, or unattractive acreage you have with these, setting the trees "scattered" natural fashion, six or seven feet apart for tall forest growth; eight to ten feet apart for more developed crowns. All of one species, or half and half of two, is often found in nature. We like successive small groves or woods, each different.

For all New England, White Pine is the very best of the reforesting trees, perfectly adapted to all the purposes of beauty and utility

" "	SEEDLINGS	4-8 in.		5.00	25.00

If your bare acres lie on an exposed hill, or by the water, or are exceptionally stony and poor in soil, add Scotch Pine and Austrian Pine to your Red Pine and Douglas Fir. Scotch and Austrian Pines, described on pages 46, and 40 and 41, are by nature fitted for exposure, and severe conditions of soil and site.

For "underplanting" too thin woods, use Douglas Fir, Balsam Fir, Arborvitae and Norway Spruce, which endure much shade. The Pines are also used in open spots where there is full light. Norway Spruce is also valuable for very quick results in Christmas tree plantations. Balsam Fir is still better for the latter, being the original traditional Christmas tree.

The prices here given are for plants grown for the essentials of roots, health and cheapness. The expense of extra space and extra care for symmetry is spared, to reduce cost. Use these trees only for the purposes intended and you will be well pleased. They grow!

Even close about the house a "woods" planting is often desirable, especially in the case of a country home

The forest atmosphere may be utilized to give an effect of size and remoteness to a usual country property

A digging crew, selecting, digging, burlapping plants for a regular order

Heredity is a mighty factor in animal or plant. Little Tree Farms trees inherit from carefully selected seed, the hardiness of hardy ancestry

Perfect cultivation demands equipment and labor. These demand capital. Little Tree Farms spends a fortune annually on its payroll and equipment

From the packers, the box or bale slides smoothly to the loading platform, from which, almost hourly, trucks and wagons deliver to the express or freight

“Trees that Live”

Grown well, dug fresh, well packed and promptly shipped at **Little Tree Farms**

OUR TREES, SHRUBS AND PLANTS are grown with such care that we ourselves have an affectionate confidence in their success. We want you to feel the same security in planting them. So to you who have not given us the pleasure of a visit, we present this outline story of a Little Tree Farms tree, to show you what factors underlie its quality:

In a seed bed prepared by workmen of long experience, is sown seed which was taken from hardy northern trees. Hand-weeding and culture for two or three years brings the seed bed to a featherly mass of perfection. Then the seedlings are dug, inspected for size and health, and the perfect ones are replanted in rows, by skilled transplanters. Two years of cultivation follow.

Then comes another transplanting with more “elbow room.” Now horse-cultivating, spraying, pruning and shearing for two more years. Then a repetition of the process.

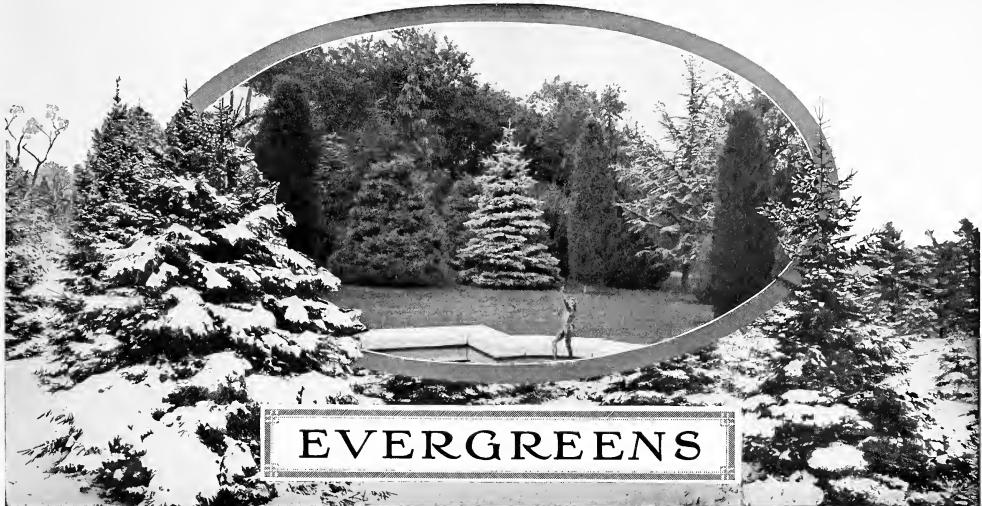

After eight or more years of expensive nursery life, the “three times transplanted, b&b” evergreen is dug, burlapped, inspected, packed and shipped, all in the space of a few hours! It comes to you “fresh as paint,” ready to grow in your soil as it grew in ours.

Each sound, healthy, handsome plant is inspected three times for quality, size and condition. If not up to standard, out it goes

Then, two to a box, lines of packers take your order in charge: trusted men, used to plants from the seed up

EVERGREENS are the most beautiful and the most enduring element in landscape planting. Richly varied in form and texture, they are alike in their perfect adaptability to all home surroundings. They protect, adorn and dignify, wherever they grow.

This noblest product of the forest is the dominant specialty of Little Tree Farms. We offer here the result of our many years of such specializing. Each evergreen listed is a truly beautiful species, genuinely hardy, and suited to the uses and conditions mentioned. All are of the high standard of excellence known far and wide as "Little Tree Farms Quality."

Abies—THE FIRS

THIE FIRS, symmetrical as the Spruces and soft as the Pines, have a peculiar graciousness in their structure and color tones. And they are immensely hardy. We grow large quantities of the three which are supremely beautiful and enduring; Balsam, Silver and Douglas. Descriptions follow.

From an Ohio customer:

"The quality and coloring of these evergreens far exceed anything I ever saw before, and it will give me great pleasure to continue sending you orders when in the market for additional evergreens."

Abies Balsamea

BALSAM FIR

The Balsam Fir is without a peer for deepest green beauty and for clean natural health and vigor. It is a straight-stemmed pyramid, of purest form, and its very dark green needles, flatly carried, are lined with light green. Each twig ends in a frosty globule of the fragrant balsam "gum" familiar to all who spend their vacations in the North woods. The cones and foliage are also fragrant. Its foliage has much the same feathery quality as the Hemlock.

Use Balsam Fir especially in Western Massachusetts, in Northern New England, and in the hills; but never on dry sand. It loves the cold, minds no wind, fresh or salt, and thrives in damp places. Our

*Little Tree Farms Balsam
two feet high, only \$3.00*

landscape department, in doing a large Connecticut estate, found a cold "draw" between two ridges. They planted Balsam Fir there, and the growth is a thing of beauty.

Like the other Firs, Balsam can stand shade. Plant it under other trees and in shady places.

And especially, plant Balsam Fir as a part of evergreen groups, large and small. Those of you who know the North woods remember the exquisite blendings Nature makes: Balsam Fir with White Spruce and Red Pine is one of her favorites. Another charming combination is suggested on page 29, in Offer O-24. Either of these groupings will be right for a northern lawn.

By the way, the Balsam Fir is the traditional "Christmas Tree."

* "B & B" means shipped with roots in a ball of burlap-tied earth.

The Silver Fir is in the foreground, where it belongs. No evergreen is lovelier and statelier on the lawn.

Abies Concolor

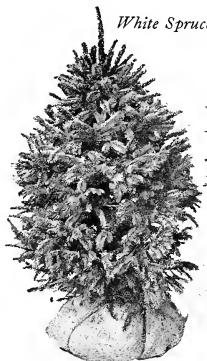

SILVER FIR

The Concolor Fir, called both "Silver" and "White," is grown at Little Tree Farms from seed of Rocky Mountain trees. It is very hardy and pre-eminently handsome. It is perfectly suited to lawns and drives, either standing alone or forming part of a group. It suitably takes the foreground of the group by reason of its brilliant tone and finished outline.

The color is very blue, or "silvery"; form among the shapiest of all evergreens; branches broad and very graceful, covered with soft, lustrous needle-sprays. As the picture above shows, the Silver Fir usually retains its branches down to the ground, which makes it highly decorative and unusually protective.

We offer the three times transplanted Firs here priced, for all decorative uses; plant them alone or in combined groups for a perfect evergreen effect. The vigorous little specimen photographed below (right) shows the quality.

For "underplanting," Little Tree Farms White

A bit of testimony to our quality (refers to a 1923 offer):

"I wish to say that one of these off which I planted is growing beautifully beside my house. Previous to putting in these trees I had put in more than thirty which I had purchased elsewhere and all of these only six took root and grew. In other words, I got about 15% growth from the trees I bought locally and 100% from the ones you shipped to me."

Silver
Fir

This wonderful "Silvery Group" is adapted for the corner of a path entrance, for the lawn, for the garden, or to use as an ornamental screen. Although so decorative in color and form, it is composed of three of the hardest of all evergreens. They all endure exposure and cold. They are all particularly choice plants of choice species

DOUGLAS FIR

The magnificent Douglas Fir at the right is a perfect type of this superb evergreen. Once seen and known, no other tree can take its place in your admiration and respect. For it is one of Nature's masterpieces. This picture shows a group of Douglas (and Silver) Firs in young maturity, planted at the further borders of a large property

Where the velvet lawn merges into informally kept grass, the stately Firs make the proper transition from lawn to woods. It is a successful landscape planting and well worth imitating.

We have some very choice six to eight foot Douglas Firs ready to grow into such imposing beauty for you
Priced on page 30

Pseudotsuga Douglasii

It is hard to describe the Douglas Fir without sprinkling the page with superlatives, for it is, to the genuine tree lover, a thing apart; of a race above its fellows. Its very name begins the story of its pre-eminence. You see, it is not "Abies," a Fir; it is only more like a Fir than like any other species. In reality, the Douglas is a Genus by itself, complete and solitary. It is of vast antiquity, like the Sequoia, and has come down to us from a remote past, retaining all the wonderful qualities of adaptability, endurance and vitality which enabled it to survive through the ages.

That vitality and that adaptability to varying conditions of sun, soil and climate make Douglas Fir a wonderful tree for the uses described on this and the next two pages. But before you turn the page, let your eye dwell for a moment on the sheer beauty of this noble evergreen.

The form of the Douglas is, as you see above, a stalwart pyramid. Its heavily clothed branches grow close to the ground like the Silver Fir, with which Landscape Architects often plant it. It is extraordinarily deep, close and massive in structure; you think at once of the word "impeneable."

The color of the Douglas Fir is very clear dark green, which silvers off at the tips of the foliage, especially in early spring.

Both color and habit vary interestingly in different specimens. The type shown above has a rival type closely resembling the Hemlock, in which the branches have a slight, graceful droop. And the shade of green is darker in the latter.

You will certainly be pleased with these Little Tree Farms Douglas Firs, three times transplanted, for lawn groups and specimens; and for planting around the house. In such extreme youth this potentially great tree has a certain irregularity, as all large scale products have. But its qualities show, even in babyhood. If you do not know the Douglas, make its acquaintance in the Offer O-24 above; it costs so little, and is such a striking group.

From a New York customer:
"Shipment of my order arrived yesterday in excellent condition."

"Trees seem to be full of life and I am especially pleased with the specimens of White Spruce and Douglas Fir which are the prettiest little specimens I have ever seen."

† The number of T's designates the number of times transplanted.

* "B&B" means shipped with roots in a ball of burlap-tied earth.

Douglas Fir growing at Little Tree Farms. The three times transplanted, balled and burlapped plant at the right shows the quality. Grown for ornamental use

Little Tree Farms Douglas Fir for ornamental planting

DOUGLAS FIRS for hedges! Does it sound absurd after reading of the majesty this species may attain? Perhaps, but the Douglas does make one of the very best evergreen hedges known. Like the Hemlock, under shearing and pruning it only grows thicker and deeper, more impenetrable. And its lower branches hug the ground. So we grow it in quantity for our customers who want a handsome, efficient, long-lived hedge. See our Douglas Fir hedge-plant below.

This ability to thrive on shearing and cutting back is also the reason for the use of Douglas Fir (and Hemlock) in evergreen bed-plantings. They supply mass, feathery foliage and color, and can be kept within bounds.

For the most compact, distinguished looking and utterly efficient evergreen hedge, reaching a dignified height, plant our lusty, well grown Little Tree Farms Douglas Firs offered above in O-25. Around the home grounds use nothing less than this size and grade. They pay!

"Underplanting" of Douglas Fir at the edges of the lawn, under tall hardwoods, to form a blended border

DOUGLAS FIR is invaluable for such a place as this. It thrives perfectly in the partial shade of sparse woods or tall scattered shade trees. At the edges of the lawn, or along your drive, you very probably have some trees you want to keep. Yet you would like to beautify that area where "nothing seems to grow." Well, an "underplanting" designed as a border, is an excellent solution for the problem.

Come out and buy from our blocks of Douglas Fir. Or send for a truck-load of the husky plants we are offering in O-26, at the right. Add variety, if you like, with a few Silver Fir and Arborvitae.

We shall be glad to help you get just the result you want. Our landscape men are familiar with the situation. They plan and plant many such places.

Douglas Fir "mass planting," showing how easily a bare area may be converted to beauty. See the Offer O-26 above and the plant pictures on page 30

Below is pictured another type of Douglas Fir planting for utility and beauty. To bring the woods-effect out further, covering the bare space was desirable. Even more desired was a screen between path and road. The simplest answer was a "mass" planting; i.e., a scattered, natural looking planting of a forest species. Wherever you need such a result you may secure it by planting our low priced Douglas Firs, irregularly, from six to ten feet apart.

Although they are low priced, they are of splendid quality, grown for the purpose.

A customer writes:

"The fifty Douglas Firs which I ordered from you arrived in excellent condition. I not only wish to thank you, but to congratulate you on the quality and the manner of packing."

Juniperus—THE JUNIPERS

THE Junipers hold a unique place in our landscape art, furnishing for this country the exquisite outline in medium scale which the classic Cypress and the ancient Cedars gave to the gardens of the Old World. There is no substitute for the Junipers, tall, prostrate and semi-prostrate, in gardens, by roadside, or around the home.

Juniperus Virginiana (Red Cedar) JUNIPER

The beauty of the Virginiana, slender spire of medium height, is amply shown in the background of the pool picture above, and in the lawn groups pictured below. We quote from last year's Year Book,—"It is the aristocrat absolute of the smaller evergreens." Our Little Tree Farms Junipers are peculiarly hardy and beautiful for all such uses. One of our tall Virginianas is shown at the upper left of the next page, and one of our semi-prostrate plants, "Communis," at the right. With these splendid plants you can produce very beautiful effects on your lawn, in your garden, or by your house.

The most effective combinations are indicated here. Use the Communis for edging paths, pools, beds, and especially to edge groups of evergreens. Use the Virginiana alone or in groups, with no other plants, as shown at the right. Or make the background of it and face with low-growing and colorful plants as shown on the next page. The Irish Juniper gives you a cool blue-green for occasional contrast and accent, in formal places. The Sabina and the Pfitzer make the beautiful middle-height effects of the pool picture, the Arborvitae appearing at left and right foreground.

From Maryland:

"The little trees arrived yesterday all in fine shape. I am more than pleased with every one. Had them in rows like soldiers showing them off and they are all so perky they look as if they could step right out."

Could any evergreen grouping be lovelier than these Junipers are, around the garden pool? The prostrate and semi-prostrate varieties fringe the water and decorate the masonry. The tall Virginiana make pointing columns for the background and give an architectural definiteness to the composition before it blends into softly massed hardwoods.

We have found the combination of Junipers and Arborvitae so effective and satisfactory to our customers that we are making a special offer on page 33 of such a group, O-27. It is a charming group, adapted to many situations and most reasonable in price.

Please notice how formal and elegant the Juniper Virginiana looks on the velvet lawn, bordered by the trimmed barberry hedge, backgrounded by shade and flowering trees, and contrasted with a mass of Rhododendron. You, too, can have such an effect.

Then see how woody and natural it looks, planted around the country house on page 33. It is, indeed, perfect for both types of plantings.

This exquisitely natural planting around a country house can be made with Little Tree Farms Juniperus Virginiana (left) in the large sizes priced on the preceding page. The twice transplanted grade can be used in such masses. For edging use our sturdy Juniperus Communis (right). All the rock plants blend well with such a group.

The fine Little Tree Farms Juniperus Communis below make just such a border as is photographed at the lower right corner of this page. We have not enough of these to keep up with the demand, so if you want the Juniper groupings this year, please be very prompt with your order. The companion plant to the Juniperus Communis, our Little Tree Farms Pinus Mughus (page 42), is also scarce.
"A word to the wise!"

Juniperus Chinensis Procumbens

PROSTRATE CHINESE JUNIPER

A very prostrate, very fine-foliated Juniper, with a rare, silver-blue color. Hardy, and delightful in compositions.

Virginia and Communis

Picea—

THE SPRUCES

The Spruces are a noble element in evergreen beauty and a notable factor in all planting for value and comfort.

Their compact pyramidal shape resembles the form of the Fir, but their foliage and habit of growth is stiffer and closer. They are extremely protective and sturdy. In color they vary richly from dark green to definite blue.

Picea Alba

WHITE SPRUCE

The White Spruce is one of the finest of all Spruces. Majestic in age, handsome in youth, charming in infancy, it combines beauty of form and color with exceeding health and vigor. We recommend it unqualifiedly for purely decorative planting, for utilitarian purposes, and for that large class of plantings which must combine use and beauty.

It is a wonderful evergreen for the foreground of a group or border, catching the light as it does in the picture above. It also makes a fine specimen standing alone.

The color of White Spruce is a shimmering silver-green, only less blue than the Blue Colorado Spruce,—with which it is often and well grouped. Its imposing pyramid of foliage begins at the ground, and usually holds this character throughout life.

Glancing at the view at the right and then at the pictures of Little Tree Farms White Spruces, in the nursery rows, and out, you will probably agree with us that the White Spruce is every bit as trim and symmetrical in its fascinating infancy as in its glorious age. These qualities make it desirable for many types of planting.

All prices of White Spruce, for ornamental uses, for large planting, and also for potting, are given on the following page. Our quality is illustrated in single plants.

To make ten feet of this perfect hedge, set eight of the splendid plants pictured at the right, as directed in Offer O-28. Trim a little once or twice each season and your dense, living hedge will be better and cheaper than any "man made" fence

White Spruce planted a generation ago on a Massachusetts lawn, as foreground of a border in which White Pine was the background. The border has become famous and the White Spruce a tower of evergreen beauty

White Spruce for Hedges

Though the White Spruce, left free to follow its bent, will attain the majesty pictured above, it yields to the shears and pruning knife, modifying its vigorous growth into thickness and closeness; so that it becomes the densest of hedges. Such a hedge is pictured below.

*Little Tree Farms
White Spruce, 2 to
3 ft. tall*

Our 3 to 4 ft. White Spruce

White Spruce—Continued

The ability to thrive when cut back, combined with its dainty beauty in early youth, makes the White Spruce available for decorative planting close about the house and steps, where it blends beautifully with the darker and lighter toned material, and fills the spaces adequately. You will find it so used on page 3. Like the Hemlock and the Douglas Fir, it can be kept in bounds for a long period. When it does outgrow its environment, the small fringe-evergreens, the prostrate and semi-prostrate ones, are ready to fill the space. Then the Spruces, Firs and Hemlocks can be replanted where needed.

But most strongly of all, we recommend this evergreen on the lawn or along the drive, to serve as a border, beautifying and protecting.

Little Tree Farms White Spruces are perfect material for this purpose. They are grown to utmost vigor of color and shape; they are so solid in structure that they shut out wind, dust and noise; they combine great individual beauty with the quality of blending into a general landscape scheme. (Please look at the border on page

This block of White Spruce lies close to the Show Ground on Pleasant Street, with many others. Ideal soil conditions, clean culture and Little Tree Farms efficient methods of production make acres of choice trees well worth looking at. You will want to have some of them growing on your land. And we hope you will enjoy them as so many customers do

A customer writes:

"It is a great pleasure to select orders and have them shipped and planted inside 10 days."

"Thanks and congratulations for promptness and splendid stock of the Douglas Fir and White Spruce trees."

Plant Little Tree Farms White Spruces, larger sizes, for a beautiful sheltering screen between drive and house. Note the low prices below

Snow and ice truly add a glory to the crystalline lustre of *Picea Pungens Glauca*, Blue Colorado Spruce

Cool in its blue-toned robes of fragrant foliage, the Blue Colorado Spruce rests eye and mind in summer's heat

THE BLUE

THE BLUE SPRUCES of Little Tree Farms are famous for beauty, health, and vigor. Perfect specimens of a perfect evergreen. They vary from a clear, jewel-like green to a lustrous green-blue, often described as "glauous." They are priced on the next page in two divisions, now adopted as standard names: *Picea Pungens*, Colorado Spruce, means the greener variant; *Picea Pungens Glauca*, Blue Colorado Spruce, means the strongly blue or silver variant. Each color has its own place in an artistic group.

These very fine specimens of Blue Colorado Spruce are placed to accentuate the tall beauty of classic pillars. As in the corner planting at the top of the page, they are a perfect "high light" for house decoration. Use for such a situation the very beautiful 4 to 5 ft., or 3 to 4 ft. plants, three times transplanted, priced on next page. We grow them for choice uses

Blue Spruces of Little Tree Farms adorn the door

One of our
Blue Spruces
ready to pot

These two Blue Colorado Spruces, well placed in front of the Pines, and further backgrounded by a few shade trees, make an effective entrance to the house. At the same time, the little planting gives real privacy and seclusion to the home; a touch of distinction to a very usual driveway.

Nothing is easier than to get such an effect. Two of the 2 to 3 ft. *Picea Pungens Glauca*, two of our large Red Pines (page 42), and two of our 12-ft. shade trees will grow to this height in a few years. The whole costs only \$23.00

SPRUCES

A BORDER PLANTING of such noble design and proportion as that above uses several of the greener variant to each glaucous Blue Spruce.

For all borders, for lawn or drive groups, for entrances, for gardens and at the door, the Blue Spruces have few rivals. They are supremely shapely, brilliant above other evergreens, and of luscious texture. We take great pleasure in offering our friends this year the highest quality Blue Spruce at thoroughly reasonable prices.

Use our Blue Spruces in foundation plantings

The Blue Spruce seems especially at home planted near a well-kept drive or path. It is by nature so "dressy," so perfectly groomed among trees, that it belongs in prominent situations. The grandest estates cherish these great evergreens as an essential feature of their design. But the Blue Spruce is not out of reach for the usual home grounds, and makes itself equally lovely there.

Blue Spruces for decorative use

Little Tree Farms extra choice Blue Colorado Spruces for pots and urns. (Ask to see decorative urns in our Show Ground) Each has a large ball of earth on its roots, wrapped in burlap. 4 ft. high, \$12.00; 3 ft. high, \$9.00; 2 ft. high, \$7.50 each

Big roots for potting or planting

OUR Blue Spruces get so much praise from people as they see them in the nursery, or receive them in orders, that we know our own pride in them is not exaggerated. We get this quality not by accident, but by scientific selection of seed, scientific growing, and utmost care. So it is a pleasure to have the plants praised. Here are a few extracts from recent letters:

"The little trees (Blue Spruce) came in last night and are beauties. They are much prettier than the trees bought from another place recently. I shall certainly take pleasure in telling my friends about your trees."

"This is to advise you that the Silver Blue Spruce arrived yesterday evening. I am pleased beyond measure with the healthy, perfect specimen which was packed so carefully and far exceeded my expectations. Your product is your best advertisement."

"The shipment was in good order; it would be unreasonable on my part to expect a finer Silver Blue Spruce than the one received, as well as balance of order. These small but perfect shaped plants have attracted considerable attention by passers by."

"I am pleased to acknowledge receipt of your shipment to me. It arrived here in three days and I set out the trees (Blue Spruce) the same evening I received them. They are the talk of the town as they certainly are very nice specimens."

"I have received the tree (Blue Spruce) in good condition. It is a beauty. I am situated on the main street and it is the admiration of all who pass."

Picea Excelsa NORWAY SPRUCE

Norway Spruce is a very dark green tree, well shaped and especially rapid in growth. It is much liked for large plantings, such as long hedges, windbreaks, and grove plantings, because it is low priced, hardy, and gives early results. It called the fastest growing of the Spruces.

Norway Spruce is nice as a foil for the brilliant tones of Blue Spruce and Silver Fir. Its dark green blends well with them. It is very well pictured on the opposite page.

This is an array of Spruces: Blue, White, Engelmann and Norway. Are they not beautiful in such masses and groups?

This is one of the many choice evergreen blocks near our Show Ground

Could you want better grown evergreens than these Little Tree Farms Colorado Spruces?

YOUNG NORWAY SPRUCES make a very pretty grove. A good many plantings have been made for Christmas trees; the shape of the tree is adapted to trimming, and the rapid growth yields a profit.

For quick and economical growth to shut off wind and views, the Norway is excellent. It grows, often, from one to two feet a year.

Snow-laden Pine, unforgettable beauty

WE HAVE ALWAYS grown Pines and have always used them in our landscape plantings. We think you will share our preference after studying them.

Pines are the greatest of the evergreen brethren. Their majestic outlines refuse to conform to any petty human definition; there is no exact name for the shape of a Pine!

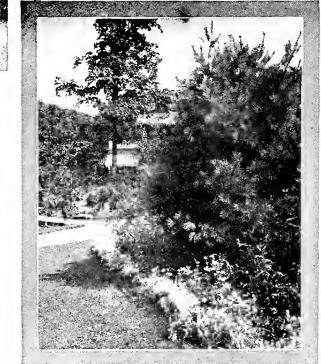

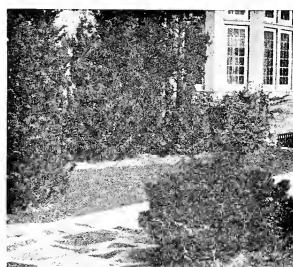

And their beauty is a beauty beyond symmetry—like the beauty of clouds, hills and waves.

Although they live to immense age and attain great height, Pines are perfectly adapted to the decorative uses of smaller evergreens during their long and charming youth.

Pinus THE PINES

The Pines of Little Tree Farms are growing in their fragrant glory all over New England; out into the West, and far down toward the sunny South.

The Pines also number in their midst several prostrate Pines, perhaps the most fascinating of which is Pinus Mughus, pictured here, and again on page 42

Pines and flowers: Strength and sweetness
Pinus Nigra AUSTRIAN PINE

The Austrian Pine, pictured more fully at the top of page 41, belongs to the group of "Hard Pines," while the White Pine, shown at the top of this page is the chief "Soft Pine." The hard pines have a curious rugged aspect which makes a very artistic effect in any landscape scheme.

Austrian Pine has an unusual spread of long branches, covered with dark green needle-foliage, stiff and resistant. It is very attractive.

But the great mission of Austrian Pine is to protect. First, it can grow on poor, dry soil such as hill tops and sandy sea-side places. Second, it can endure the contact of sweeping wind and even salt spray. Third, it resists snow and ice pressure unusually well.

Young Austrian Pine decorated by frost and snow. The individual trees are interesting in shape and habit

Little Tree Farms Austrian Pine

The Austrian Pine has the handsomest "candles" of all, in the spring. They are charming

Austrian Pine—Continued

Plant our beautiful 3 to 4 ft. Austrian Pine shown above for single trees or artistic groups. Only \$4.00 apiece! But if you need "Cover," use a quantity of the cheaper plants, and set them rather close,—eight to ten feet apart. We are offering a few thousand small plants at very small prices for customers who have a large area to cover.

This well-kept block of Austrian Pine at Little Tree Farms is an example of

Pinus Flexilis

LIMBER PINE

The Limber Pine photographed at 4 ft. high (left), is rare and very exquisite; you will want it in among your evergreens if you ask to see it in our Show Ground. This is the first year we have had it in numbers enough to supply a reasonable demand.

The Limber Pine is a "soft" pine, somewhat resembling the White Pine, but its color is almost as blue as the Blue Colorado Spruce. This gives it a unique place as a border or lawn evergreen. Its branches reach up, and its needles surround the branchlets in a close sheath of blue-green, not fringing or spraying out, but held toward the twig. The effect is simply charming, and very unusual. Center shaft straight and smooth.

our quantity production. You see it does not mean careless production

The luscious growth of young Red Pine makes a nice background for flowers

Red Pine laden with snow is a beautiful sight. Its big needles carry so much

THE RED PINE

Pinus Resinosa

We have always held Red Pine to be a supremely beautiful and valuable species, and have been proud of our own Red Pine product. So many people now share this feeling that we have not as many Red Pines to offer this year as usual.

Please order promptly all you will need of this "best of all Hard Pines."

RED PINE

We have only a limited supply of these Red Pines

The Red Pine (sometimes called "Norway Pine") is as beautiful and valuable as the White Pine; they are the royal members of the hard and soft groups.

The Red Pine grows absolutely straight, and carries magnificent branches clothed in large masses of long needles. It is rich, dark green, and its trunk has a rose-tint in its brown. The whole structure and outline is individual and appealing—more gracious than the Austrian, more rugged than the White.

Plant groups of Red Pine in the background of your garden and on your lawn and along the drive. They give a mass of rich color and make the most imposing border.

Specially, plant Red Pine for protection, with beauty. Each tree offers an impenetrable mass of tufted foliage to the wind, and affords a perfect retreat to all behind it. No unpleasing view or harsh dust penetrates a Red Pine screen.

And the Red Pine endures poor soil, exposure and salt spray. Like Brer Rabbit, it was "born 'n' bred" in that particular kind of "brier patch!" So order now what Red Pine you need for hilltop, seaside or exposed place.

A White Pine grove on the lawn is an outdoor room for the family

White Pine, 8 to 10 ft., for grove, \$9.00

THE WHITE PINE

Pinus Strobus

WHITE PINE

White Pine, the biggest, most majestic and dearest of New England's cherished evergreens, is familiar to every one of our customers. The grove picture above very well shows the great, soft-foliaged branching system, always reaching out in flat "layers," which sets off the outline of the White Pine so definitely from most other evergreens. And the little view in the middle of page 44 shows the irregular sweeping "skyline" which is so often written of by nature-lovers and landscape architects. This outline drifts across the sky in long free lines like cloud-masses, far above the rounded tops of deciduous trees and the pointed tops of Spruce and Fir. It makes the most restful and most inspired landscape picture of all. The color of White Pine foliage is a light green, slightly bluish.

Just a few of our big White Pines, like the one above, set 10 to 15 feet apart, "build" an outdoor room where the babies may play and mother may enjoy her tea with her friends.

Use these larger plants also for drives and entrances. They give immediate effect

This tone is peculiarly restful to the eye, in large masses, in both winter and summer light.

No landscape picture in New England is quite perfect without the characteristic touch of White Pine beauty. No property of size is complete without its White Pine planting. So Little Tree Farms, being of the very soil of New England, grows this great evergreen for you, our neighbors in these northern states, in all the sizes suited to the chief types of valuable plantings.

For your lawn-grove, your driveway, for a big immediate group to hide the garage or the kitchen door, etc., we can give you magnificently rooted, three times transplanted trees, all the way from four to ten feet tall, massive in proportion. These cost from \$3.50 to \$8.00 apiece in groups of five or more.

For a long strip of lawn, craving protection from the dusty street, like that pictured on the next page, or from your next neighbor's adjoining strip, buy cheaper, in quantity, twice transplanted trees; and set them closer. From two to ten feet we have them; from \$6.00 a hundred, up. These serve admirably, also, in the background of groups, and to use for a thick screen. See prices of all White Pines on page 44.

A wholly charming use of White Pine, where the driveway nears the house

White Pine windbreak planted in a row. Even this plain form of planting results in beauty if White Pine is used

White Pine—Continued

The attractive house at the left owes half its charm to the magnificent over-arching White Pine above, and the harmonious mass of the young White Pines below. These latter are placed so that they shut off the view into the sunporch from the drive; they shut out from the porch, also, all sense of intrusion. While they frame the house-picture and decorate the drive's end.

It is very simple and successful to plant small groups of White Pine like this, on both sides of the drive. They are also well placed at the entrance.

A more designed and continuous border, for longer drives, or for lawn edges, is well illustrated at the bottom of the opposite page. No planting could well be simpler, certainly none less expensive! It is only necessary to send for a truck-load of Little Tree Farms White Pines, at the reasonable prices quoted here, and plant them in well-dug holes filled with loam; some only ten feet apart, some as far as twenty feet apart. The general curve made by various smaller groups gives ample opportunity for artistic effect.

For our many customers who have some bare acreage which they wish at once to beautify and to build up in value, we grow the smaller White Pines listed as twice and once transplanted. There are many places where the most successful planting is simply a scattered, woody planting of one good species or of two in combination. For such a place, be sure to take advantage of the offer below, O-32. Read also pages 43 and 45.

O 32** **WHITE PINE GROVE**
\$40.00

50 White Pine †[†] 3 to 4 feet
(Regular Price \$42.50)

Fifty of these well developed, well grown Pines will make a large grove, or border, or several small groves. Plant them eight to ten feet apart.

Carefully packed, delivered free to transportation companies, Framingham, Mass.

Remittance with order.

Please order by name and number

A White Pine from Little Tree Farms, as it looks delivered to you to plant.

The burlap covers a healthy mass of fibrous roots, still encased in their native loam.

Such a strong-rooted, shapely, healthy-foliated young tree looks well from the moment it is placed in the ground, and looks "better and better" as the seasons roll around.

* "B&B" means shipped with roots in a ball of burlap-tied earth.			

This block of superb bushy transplants gives us such specimen White Pines as shown at the left

WE believe that our stock and our methods deserve your confidence. We quote from a few letters:

"All trees I have purchased of you have given utmost satisfaction. All are living and they run along a period of five years. Unusual, I think, for plantings taken from salt air and placed among the sand hills of Lake Michigan."

"I'm in receipt of my order and I'm glad to state that the trees reached me promptly and in splendid condition. They certainly look like fine stock and I'm very pleased with them as I have been with everything that you have shipped me. It is a pleasure to do business with you and to recommend you to my friends."

"My order arrived April 28th in excellent condition. Your trees are everything that you advertise them to be, and I am very well satisfied!"

"You have filled previous orders for the Club sent by me from my New York address. The 250 Red Pine furnished the Club two years ago are doing wonders. You would be delighted if you saw them."

"I have intended to write you again since I received my second shipment of little trees. I recall now the thrill we had when we unpacked that last shipment. We had been thinking only of the probable height of the various trees, and had forgotten entirely about their spread, so we were very much surprised to find them to be so much larger than we had anticipated. Both shipments arrived in splendid condition and we have been more than pleased with the quality of trees and shrubs in our order. Everything that we received from you has flourished splendidly, and we feel that your care in packing has played a large part in our success."

A very satisfactory roadside border made by setting groups of White Pine so that the edge follows an attractive curve. Red Pine can be combined with White, with fine results

FOR A "PINE PATH," secluded from view, shaded from sun, protected from wind, plant our large sized transplants, ten to fifteen feet part. It will add to the beauty and value of your property as it becomes a permanent wind-break and background for all in front of it.

The White Pine hedge pictured below shows how much protection can be had for orchard and garden, without sacrificing beauty, and at lowest cost. Sheared to a soft green wall, fifteen feet high, it also encloses and decorates the service wall and the garage. Use our hedge offer for economy and service. See O-33 directly below. If you are interested in hedges, read also pages 7, 8 and 9.

Just another word about woods planting, or groves of large size. Nothing so surely improves a country property as to plant good trees on it. Whether you live on it or eventually sell, every planted acre pays good interest.

Little care is needed after the trees establish themselves, and their increase in size and beauty grows more rapid year by year. In almost no time you are enjoying a young woods; you are laying out paths, talking wisely of "thinning," and realizing that trees have a charm and personality almost human.

And all this while you are *raising timber*; making your little bit of the earth's surface truly valuable, serviceable to humanity. You are growing a crop of valuable wood while you enjoy it. A good sort of "unearned increment."

For pleasure, beauty and value, plant White Pine.

One of our customers greatly enjoys his "Pine Path" from the garage to the "mowing"

White Pine makes a magnificent service hedge. Thick, tall, handsome. Keep sheared

This most attractive grove of Hard Pines affords protection from wind while it decorates the home

Pinus Sylvestris

SCOTCH PINE

The Scotch Pine, a "Hard Pine," is somewhat like the Austrian in its artistic rugged shape, but has blue-green foliage; the needles are short and stiff. It has very pretty "candles" in early spring.

Scotch Pine is distinctively attractive used alone or in groups of Pines, or amongst blended evergreens; it is much used in decorative plantings. In youth it is very silvery colored, very vigorous, and well clothed. In age, it tends toward artistic irregular outlines, for which designers use it in "Japanese" gardens.

For all decorative uses and for more immediate results in protective plantings, such as windbreaks, we strongly recommend the large, three times transplanted Scotch Pines priced here, a nice example of which is shown above with its "Ball and Burlap" travelling dress on.

Scotch Pine, like Red Pine, is perfectly suited for protective and utility plantings by the sea, on hill tops, and under other hard conditions of soil and exposure. It is especially hardy at the seashore, enduring the salt winds and thriving on the sandy soil. (We show a helpful photograph of Scotch Pines thriving on a sand plain by the sea, on page 20.) It also grows well on dry poor soil of hillsides,—takes the harsh conditions of wind and weather with a "hard pine" philosophy. So plant it around your summer home, alone or with the Red Pine and Austrian. It will give a most attractive contrast to these in color and character.

In situations too exposed for White Pine and too meagre of soil for other trees, you may still have a valuable woods planting. Use once transplanted Scotch Pines at smallest outlay, with a result at once enduring and charming. They cost \$100.00 a thousand.

Customers on Long Island, in New York State, and in New Jersey, often have soil and climate conditions that demand such a tree. We are glad to recommend Scotch Pine to them, for it combines great usefulness and low price with real charm and value. It grows rapidly, is hardy and healthy and very resistant of insects and disease.

Taxus Cupidata Brevifolia

DWARF JAPANESE YEW

The dwarf Japanese Yew, which we grow to perfection at Little Tree Farms, is more prostrate than the above, and is the most aristocratically beautiful low-growing evergreen we know. Has exquisite tiny, glossy leaves and rare little scarlet berries. Wonderful tips in spring and deep green all winter.

THREE TIMES TRANSPLANTED *B&B		
Height	Each	to
12 to 18 in.	\$4.50	\$40.00

* "B&B" means shipped with roots in a ball of burlap-tied earth.

Prices include packing and delivery F.O.B. Framingham.

Thuja—THE ARBORVITAE

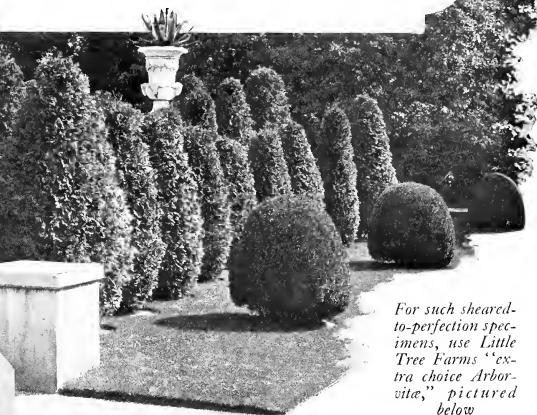

Unsheared, but regular in form

Thuja Occidentalis ARBORVITAE or WHITE CEDAR

Little Tree Farms Arborvitae are simply as fine as plants can be. They adorn any home. Many of our customers are adding to their planted evergreens a decorative touch by placing two of these perfect potted Arborvitae at the front entrance. You will find sizes and prices on page 48. This pictured plant shows the flat, lacy foliage of Arborvitae well, and indicates the extremely close habit which allows such shearing as is shown above. The color is dark green, bronzing in winter. Spring tips very light green. Foliage fragrant.

Groups of our three times transplanted Arborvitae from \$2.00 to \$3.00 each, according to size, transform your house picture; you may have the most formal effect by trimming, or the modified naturalistic effect which is more popular today. One very lovely group is made by using the "Tower" effect. See Offer O-35, page 49.

Arborvitae is also charming combined with its Globe and Pyramidal forms. But perhaps loveliest with Junipers, tall and prostrate. It is really indispensable in good home landscape planting.

For such sheared-to-perfection specimens, use Little Tree Farms' "extra choice Arborvitae," pictured below

ARBORVITAE, very clearly pictured on this page, is one of the loveliest and most beloved of all evergreens, and one for generations associated with gardens and homes. Its pleasant medium size, delightful shapes,—all so trim and definite,—fine color and beautiful foliage, all combine to give it first place in plantings close about the house.

With the Junipers and the Yews, it supplies the choicest groups for big and little gardens and lawns.

"Extra choice," for potting, 4 ft., \$5.00

The vigorous roots, splendid color and symmetry, as well as the reasonable cost of Little Tree Farms Arborvitae, fit them for liberal planting to produce a naturalistic picture, like the garden groups at the top of page 48.

This picture gives you a good idea of the very decorative quality of Arborvitae for home planting.

For "underplanting" tall shade trees, and where the situation does not demand the very best, use our twice transplanted plants, at lower prices. But for quickest growth, and for greatest ability to thrive under trying conditions, it always pays to buy the three times transplanted trees.

This is true even of hedge planting. If you are planting a hedge in front of your house, or around your flower garden, you want it to "get to be" a hedge promptly; and you want every plant to live. That is why we recommend the beautiful plant at the top of page 48 for finest hedges. Our Hedge Offer (O-34, page 48) is of the same quality but smaller.

Use the cheaper twice transplants for a service hedge, or a very long one, and for a windbreak.

They are also fine for mass planting.

Even such close exact shearing as makes this hedge a fine specimen of old-time art, can be done with the Little Tree Farms Arborvitæ, at right

This pretty Arborvitæ hedge reminds the editor of the one surrounding a rose garden in our Show Ground. Its big plants show results, this first year

Our Arborvitæ, 2 to 3 ft. tall

*For the finest, densest hedge, plant close
—one and a half feet apart*

That you may feel confidence in sending your orders for these fine plants, we quote from a few of the friendly letters that fill a large file.

"The evergreens arrived last week in perfect condition. These trees are very fine specimens, much better than I had hoped for, and have been much admired by neighbors."

"I want to let you know that my order reached me in good condition, and that I was very much pleased with my little trees."

"I received the order and am delighted. I don't believe the value could be duplicated anywhere for the money."

"The evergreens arrived O.K. and were put into the ground at once. The trees are lovely ones and have met with our entire satisfaction."

ARBORVITAE "TOWER" GROUP

"I am delighted with my order, especially the little evergreens. Your plants are far superior to any others I have seen this season. My next door neighbor has been planting some evergreens this spring too, and the contrast was quite marked between the trees which you sent me and the trees my neighbor is planting."

One of Nature's prettiest groups is a "tower" of Arborvitae clumped together like one great plant

We imitate Nature's clump in this "Arborvitae Tower" Offer. Plant it according to diagram above

ARBORVITAE "TOWER"

\$17.00

1 Amer. Arborvitae	TTT *B&B	3 to 4 ft.
3 " "	TTT B&B	2 to 3 ft.
3 " "	TTT B&B	18 to 24 in.

(Regular Price \$19.00)

To make a charming tower-like group of Arborvitae at the lowest possible cost, combine the planting plan given above. The distance from the center evergreen to each of the others is five feet, or six feet, as you choose. The closer setting makes a more compact tower. This group, when grown larger, gives the impression of one superbly solid, large American tree of pyramidal shape; an impression often given by natural groups.

The Canadian Hemlock, as seen at the Arnold Arboretum, is a superbly ornamental tree

Canadian Hemlock growing from seed at Little Tree Farms No. 1

As hardy as it is delicate to look at. A child of the great North

Tsuga— THE HEMLOCKS

Tsuga Canadensis

The Canadian Hemlock (often called American Hemlock) is one of the most beautiful evergreens in the world, to our eyes. A product of the North and at home in the great wilds, it brings its noble beauty and vigor to the service of man's most planned environment without loss of personality. The quality of its gently drooping foliage makes it a wonderful evergreen for planting close to the severe lines of porch or steps. And the fact that it grows slowly and thrives under severe pruning makes this use possible.

Please notice the effective placing of Hemlock beside the high steps, shown at the lower right. It makes a soft mass of sprays, which can be kept in bounds by annual pruning.

The glorious Yew (Taxus) in the foreground below combines well with Hemlock. Yew prices page 46

The Hemlock is very dark green, soft and rich of tone; spring brings it ethereal light green "tips."

It grows well on northerly slopes and exposed to cold; a "Hemlock glade" is always one of Nature's delights. A group in the lawn border is beautiful.

We sell our Hemlocks so fast each year that our stock is always low. But for the early orders we have this year some very fine little seedlings which we can send you for "underplanting" at only \$100.00 per thousand, for 6 to 9 inch plants. These will be merest fun to plant.

Our three times transplanted Canadian Hemlock, right for all ornamental plantings

Hemlock is supremely good for shady places. Like the Douglas Fir, it thrives under other trees. We have this year some very fine little seedlings which we can send you for "underplanting" at only \$100.00 per thousand, for 6 to 9 inch plants. These will be merest fun to plant.

Hemlock makes a beautiful soft-textured hedge. We wish we had plants enough to assure you of a hedge if you want one. But we can only say, we have hedges for the early comers. If you wish, be prompt.

Below, Hemlocks combined with Arborvitae, etc., in a stately, decorative planting

DECIDUOUS TREES

THE deciduous trees are man's steadfast friends in the "dust and heat of the day." Their great, green leaf-canopies give shade in midsummer; their buds are a joy in spring; their gorgeous foliage is the climax of autumn beauty.

No home in our climate should lack its appropriate shade trees. They give the beautiful "upper story" to all the designs of flowers and evergreens. And they furnish so much real luxury in summer that they are indispensable.

Acer—THE MAPLES

THE Maples are perhaps the most liked of all shade trees. They have the most brilliant foliage in autumn, the rosiest buds in spring. Their leaves and seed sprays are charming.

Little Tree Farms grows the best Maples to perfection. These listed are all "reliables," and of highest quality.

Acer Negundo

BOX ELDER
Box Elder is the best "fastfiller" of space—grows on dry soil and endures strong wind. For quickest shade and effect, plant this pleasant tree.

THREE TIMES TRANSPLANTED

Height	Each	10
10 to 12 ft.	\$2.50	\$20.00
8 to 10 ft.	2.25	18.00

From a few letters about our trees:

"The Maple trees reached me promptly and in very good condition. I am delighted with them."

"I wish to thank you for the very nice trees you sent me. They arrived in good condition and I shall take pleasure in ordering from you again in the spring."

"The three Norway Maple trees you sent me the early part of May are very fine specimens and are doing fine. Am very much pleased with them."

Acer Platanoides

NORWAY MAPLE

The Norway Maple is very well pictured in the young shade tree on page 53, and its appearance at the best stage of growth for planting is equally well shown in the accompanying photograph of a Little Tree Farms Norway Maple.

The trim, clean aspect of the shade tree there pictured shows why the Norway Maple has been so much in demand for lawns, and especially for suburban homes. It is very often seen in our suburbs, planted along the drives and streets, and on the lawns.

It is quite generally recommended for street planting, especially in towns, because it seems able to thrive in the town conditions. It stands an amount of smoke, dust and drought which would kill many other trees. Moreover, it is not susceptible to most of the insects and diseases.

Stately shade trees decorate the ampler estates as well as simple homes

The Norway Maple has a very full crown of symmetrical rounded outline, something like that of the Linden. Its leaves form a dense mass of healthy deep green color. Autumn coloring is brilliant yellow, forming a fine symphony of color with the scarlet tones of the Sugar Maple, and the rich browns of Oaks.

This combination of colorings for autumn and spring can be yours in a charming little grove for only \$14.00, if you send for our Offer O-37 on page 53. The splendid sturdy trees are from 8 to 10 feet high, and how they do grow! The Norway Maple is a very fast grower and the Sugar Maple is no "slow coach." Plant the offer on your side lawn, as scattered shade trees, or on both sides of your driveway. A tremendous value for your money.

For the very best street planting, use our three times transplanted Sugar Maples, 6 to 16 ft. tall, at \$15 to \$35 for ten

THE SUGAR MAPLE

THE Sugar Maple is really an extremely handsome shade tree, one of the handsomest. And our Little Tree Farms Sugar Maples this year are certainly of the very best. The prices we are quoting offer a great opportunity to plant the best for little money; we doubt if we can ever repeat these prices.

Notice the absolutely beautiful shapes of the different Sugar Maple trees pictured on this page; no two exactly alike and all supremely well formed. A noble tree, magnificent in height and spread, symmetrical but never stiff, amply shade-giving but not smotheringly close and thick.

Indeed Sugar Maple is beyond criticism as a lawn tree, either alone or grouped. And it is equally fine for drives, avenues and entrances.

A Sugar Maple adds definitely to the real estate value of any property

For street trees the Sugar Maple is "first class." It has the qualities of health, sturdiness, steady growth and resistance to disease that this use demands. It makes an adequate and pleasant shade, has beauty at all seasons, and its wood does not break easily in storms. For these reasons it has always been a very favorite street tree in the prosperous town, and a thoroughly successful tree for large plantings in parks and private estates.

Color beauty in deciduous trees is too little understood. We have it in our power to look out on a constant succession of loveliest colorings, just by planting a few of the right trees in view of our windows. The Sugar Maple has marvelous colorings. It is the tree that gives that most gorgeous red in autumn which you remember from your Canadian and New England trips. And its spring buds are exquisite. Indeed, so lovely is the leaf in form and color that Canada chose it for her insignia, the Canadian "Maple Leaf."

You will always rejoice to have planted a Sugar Maple.

Offer No. O 36 **A "SUGAR" GROUP** **\$10.00**

6 Sugar Maple †††† 8 to 10 ft.

Plant these six big, three times transplanted Sugar Maples in one group, about fifteen feet between trees, at the side or back of a large lawn, for a beauty spot in spring and autumn, and a "sugar grove" for the children. Or plant three on each side of your drive, paddock drive or lawn trees.

Carefully packed and delivered to the transportation companies, Framingham, Mass.

The six Little Tree Farms Sugar Maples offered here for \$10.00

Little Tree Farms Sugar Maples, thriving and promising; only \$20.00 for ten, 10 to 12 ft. high. For street and lawn planting

Acer Dasycarpum Saccharinum SILVER MAPLE

Silver Maple is a quick-service tree, and yet a hardy one, giving excellent shade. It grows so fast that it has great value for situations where you need shade as early as possible. It can be planted on sandy soil.

Silver Maple has a spreading crown, well covered with shapely leaves. It gets its name from the "silver lining" of the leaves; they are silvery green on the underside. Plant Little Tree Farms Silver Maples for quick results.

Of the small flowering trees, the Flowering Crabapple and the Flowering Dogwoods are notably lovely

These Catalpas are nicely placed where their quaintly exaggerated symmetry is "in key"

White Ash Seed Spray

Fraxinus— THE ASH

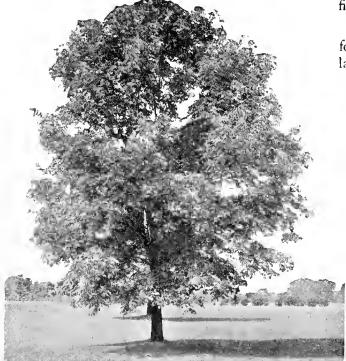

WHITE ASH is a Little Tree Farms favorite. It is our business in life to know the best in trees, to eliminate the impostors and recommend the tried and true. White Ash is tried and true, and we offer it to our friends with full confidence that it will add beauty and value to their home surroundings.

Let us tell you a few White Ash characteristics.

Its trunk grows straight as a mast, is smooth as velvet, and of the finest elephant-gray color. The general shape of the crown is a magnificent oval. It reaches great height and long life.

In youth it is delicately ornamental, as is well shown in the above picture of a young White Ash group. In maturity it is majestic.

White Ash is a perfect lawn tree. Notice its size and symmetry

At all stages White Ash is a tree of most graceful shape and grateful habit;—its shade being furnished just at the hot season, when needed, the leaves opening rather late and not holding on into cold weather.

The leaves are carried on both sides of the long stems, making a fern-like spray. Their autumn color is a pure mellow gold, a beautiful background and contrast for the flame color of the Maples.

White Ash is not only a favorite of landscape men and tree lovers; it is also highly favored by nature, for it is immune to gypsy moths. Indeed, it is a peculiarly healthy and desirable tree.

For its vigor, its steady *rapid growth*, its beauty and its favorable shade habits, use White Ash wherever you want a tall clean-shaped tree in midsummer, but need the sunshine and warmth during a long season. Along your drive you will find it unusual and attractive.

Use our White Ash, three times transplanted, for street planting, driveway planting and on lawns. They are very low priced.

THIS species has always been recognized as a good forest investment for it makes a big volume of sound and useful wood in a comparatively short time. (Its annual rate of growth averages 3 to 4 ft. a year.)

A White Ash woods is also easy to maintain. And it can be planted where many other species would be unable to thrive. While it grows best, of course, on favorable land, it "can do with" wet land, and can endure severe climate conditions.

During its growth to commercial value a White Ash woods makes a charming area for riding or walking. The young trees are so straight and trim; their foliage so abundant and graceful. And in autumn they catch and increase all the gold of the sunlight, before throwing it back to you.

Many planters prefer a mixed stand of White Ash and Pine. This makes an equally good result and an equally pleasant woods. We can recommend it. Let us send you one of our trucks with a load of fine young White Ash and White or Red Pine, at our low prices. They will transform a bare field or hill into a most interesting young woods, both profitable and esthetic.

Little Tree Farms shade trees are grown with all the nicety and skill given to our evergreens. Our Ash and Linden are both splendid

For an especially fine value, in money and beauty both, we suggest a grove or woody border made of the following offer. The quality of our Little Tree Farms hardwoods is well shown in the nursery rows on this and other pages.

**Offer
No.
O 39**

**WHITE ASH
GROVE
\$30.00**

50 White Ash †ft 8 to 10 ft.
(Regular Price \$40.00)

These White Ash are right to plant 8 to 10 feet apart for shade or land improvement, in any field where you would prefer a pretty and profitable wood lot to a waste space. If you have a hillside or corner where you can't easily make hay, or where the soil is poor, and rocky, these twice transplanted White Ash trees will dig their good roots down into the stony soil and grow on it, making a larger groove as charming as the group on page 55.

Carefully packed and delivered to the transportation companies, Framingham, Mass.

Quercus—THE OAKS

THE Oaks are one of the most majestic species. Their build is powerful, branching system rugged, wood valuable. Their acorns are the food of many of our small woods friends and domestic animals. The three oaks here listed are splendid members of a mighty family. Rugged, long-lived and handsome, they are perfect for roadside, lawn or forest.

Little Tree Farms Oaks are grown for vigor, fine roots, and beauty. Worthy offspring of a great tribe.

Quercus Bicolor

SWAMP WHITE OAK

The Swamp White Oak is a wonderful tree to stand alone in ample space with plenty of sunlight. The massive light gray trunk of this Oak supports a majestic crown of large and finely formed leaves which take on rich purple tones in autumn.

Little Tree Farms Oaks are grown for street, avenue and lawn planting, and give results. See also page 57, for our fine Red Oaks

Red Oaks make a wonderful avenue planting. They have style, without stiffness. Glorious autumn colorings

Quercus Rubra

This is the very best of all the Oaks in our opinion, and for most purposes. Consequently we always grow more Red Oak than any other oak. We invite your close inspection of our young Red Oaks pictured below.

You may order our three times transplanted Red Oaks for the most conspicuous and trying situations, and be assured of success. The 12 to 15 ft. size at \$5.00 each, and the 10 to 12 ft. ones at \$3.00 for ten, are very choice for lawn and street planting. Equally choice, though smaller, are the 8 to 10 ft. specimens at \$2.50, and the 6 to 8 ft. ones at \$2.00. At these prices and with our quality, a noble oak avenue is easily within reach of private owners as well as towns and communities.

The Red Oak grows and thrives everywhere, for it is supremely healthy and vigorous by nature. Grows fast everywhere, too. Yet it does not become overpoweringly big.

RED OAK

Azalea Arboreascens SWEET AZALEA

This Azalea is as hardy as it is lovely, and its fragrance has earned for it the popular name of Sweet Azalea. The white rose-tinted flowers appear early in spring, followed by small dark green leaves.

Quality	Height	Each	10
TTTT	*B&B	18 to 24 in.	\$3.00 \$25.00

Azalea Calendulacea FLAME AZALEA

The masses of red and orange-colored flowers appearing in June, make this "favorite" a brilliant and gorgeous sight. Of medium height, its place in any planting group is the middle foreground. It will add a delightful touch of color.

Quality	Height	Each	10
TTTT	*B&B	18 to 24 in.	\$3.00 \$25.00

Azalea Viscosa SWAMP AZALEA

Of distinct advantage is the late blooming period of this charming Azalea. Its beautiful white flowers do not appear until June or July and its moisture-loving roots fit it well for moist soils. See illustration above.

Quality	Height	Each	10
TTTT	*B&B	2 to 3 ft.	\$2.50 \$20.00

Can You Ask for a Better Recommendation?

"The shrubs and trees continued growing as if they had had no transplanting interruption. The plants we did was for our uncle, whose home we occupied during the winter. He was delighted upon his return in the spring, with the start for next spring. He, too, has learned to love the little trees that grow."

Offer N° 43

AZALEA GROUP

\$7.50

- 1 Sweet Azalea TTTT *B&B 18 to 24 in.
- 1 Flame Azalea TTT B&B 18 to 24 in.
- 1 Swamp Azalea TTT B&B 2 to 3 ft.

(Regular Price \$8.50)

One of our 2 to 3 ft. Swamp Azalea, at \$2.50 each

Berberis Thunbergii JAPANESE BARBERRY

The charming trim hedges characterizing our prosperous suburbs are so often of Japanese Barberry, that to many people "hedge" is synonymous with barberry. It is hardy, healthy and easy to plant. See Offer O-44, and picture above.

Quality	Height	Each	10	100
TTT	18 to 24 in.	\$0.75	\$5.00	\$40.00
TT	12 to 18 in.	.50	3.50	30.00

Berberis Vulgaris EUROPEAN BARBERRY

The golden yellow flowers and light green leaves in spring, and the persistent bright scarlet berries in fall, make this valuable for a tall hedge or a background for the smaller shrubs. Not for wheat regions.

Quality	Height	Each	10	100
TTT	18 to 24 in.	\$0.60	\$4.00	\$35.00
TT	12 to 18 in.	3.00	25.00	250.00
TT	8 to 12 in.	2.00	15.00	150.00

Cornus Panicleata GRAY DOGWOOD

Fill the bare spot in your lawn background with this charming hardy shrub. It grows six to eight feet tall and carries white berries.

Quality	Height	Each	10	100
TTT	2 to 3 ft.	\$0.75	\$5.00	\$40.00
TT	18 to 24 in.	4.00	30.00	300.00

Cornus Sibirica CORAL DOGWOOD

The bright coral-red branches make a charming effect against the snow. Plant freely with the Goldentwig Dogwood in your lawn borders.

Quality	Height	Each	10	100
TTT	2 to 3 ft.	\$0.75	\$6.00	\$50.00

Cornus Stolonifera Lutea GOLDENTWIG DOGWOOD

This low-growing shrub combines well with Coral Dogwood, its bright yellow branches giving a piquant gaiety to winter.

Quality	Height	Each	10	100
TTT	3 to 4 ft.	\$0.75	\$6.00	\$50.00

Cotoneaster Wilsoni WILSON COTONEASTER

Another shrub valued for its winter beauty of bright red berries. Plant in a dry, well drained soil for best results.

Quality	Height	Each	10
TTT	5 to 6 ft.	\$1.50	\$12.00

The number of T's shows number of times transplanted. "B & B" shipped with roots in a ball of burlap-filled earth. Prices include packing and delivery F.O.B. Framingham.

Use either the Ibla or California Privet for formal or natural effect. You will be pleased with either

This delightful shrub border is easily made with our Offers combined. You may even transform the city back yard to a beauty spot

An excellent example of the Hydrangeas in bloom. Plant them against the high wall

Crataegus Crusgalli

COCKSPUR THORN

The Cockspur Thorn has dense, dark, glossy leaves which turn scarlet in autumn. The bright red berries remain all winter.

Quality	Height	Each	10	100
TTT	4 to 5 ft.	\$1.00	\$8.50	\$75.00

Cydonia Japonica

FLOWERING QUINCE

The scarlet clustered flowers in early spring and the large fleshy fruit in fall, make this a most desirable shrub to plant as a low-growing hedge, or in the border.

Quality	Height	Each	10	
TTT	18 to 24 in.	\$1.00	\$7.50	

Deutzia Crenata

SINGLE WHITE DEUTZIA

This charming white-flowered, sweet scented shrub blossoms in early summer. It thrives in almost any well drained soil, and is excellent to use in lawn borders.

Quality	Height	Each	10	
TTT	2 to 3 ft.	\$0.75	\$6.00	

Deutzia Gracilis

SLENDER DEUTZIA

Once you know this delightful little shrub, you will never forget it. Its slender arching branches carry racemes of delicate, pure white flowers in May and June. It seldom grows more than two feet high, and makes a pretty facing for the border.

Quality	Height	Each	10	
TTT	12 to 18 in.	\$0.75	\$6.00	

Deutzia Scabra var.

PRIDE OF ROCHESTER

The Deutzias are very popular ornamental shrubs. They are of easy cultivation and flower freely. It is best to prune as little as possible, merely thinning out the old wood occasionally.

Quality	Height	Each	10	100
TTT	2 to 3 ft.	\$0.75	6.00	\$50.00

Euonymus Alatus

WINGED EUONYMUS

The Winged Euonymus is so named for its strange projecting ridges of bark. Its fine purple tone in autumn makes it a valuable addition to the home surroundings.

Quality	Height	Each	10	
TTT	2 to 3 ft.	\$0.75	\$6.00	

Forsythia Suspensa Fortunei

FORTUNE FORSYTHIA

The Forsythia is the first golden note of greeting to spring. It has masses of delicate yet brilliant yellow flowers which come before the leaves. It grows tall and large and needs room.

Quality	Height	Each	10	100
TTT	2 to 3 ft.	\$0.75	\$6.00	\$50.00

Forsythia Suspensa Vitellina

DROOPING GOLDEN BELL

This is a new and charming variety of Forsythia. Its gracefully drooping habit and orange-colored flowers add a new note to the shrubbery border.

Quality	Height	Each	10	100
TTT	2 to 3 ft.	\$0.75	\$6.00	\$50.00

"Prompt Service and Splendid Specimens."

"I take this opportunity to thank you for the prompt service and splendid specimens sent me on a previous order."

"We received the plants and they are in a very fine condition, and I am surely pleased with same."

Offer No 44

FIFTY-FOOT BARBERRY HEDGE

\$14.00

50 Japanese Barberry 12 to 18 in.
(Regular Price \$15.00)

These twice transplanted, fine little Barberry hedge plants will make a charming hedge for a fifty-foot front if planted a foot apart. Some planters set them in a half foot apart, making a hedge half again as long.

Carefully packed and delivered free to the transportation companies, Framingham, Mass.

Vanhoutte Spirea with its gracefully drooping branches makes just such a charming effect

The low-growing Slender Deutzia is just the right shrub for such places as this

The Roses of the Rugosa type make strong, big shrubs and are fine for hedges and borders

Lonicera Tatarica TATARIAN HONEYSUCKLE

This popular variety bears beautiful white to crimson flowers in May and June, followed in August by bright red berries.

Quality	Height	Each	10	100
TTT	2 to 3 ft.	\$0.75	\$6.00	\$50.00

Lonicera Tatarica Grandiflora Rubra LARGE FLOWERED HONEYSUCKLE

The Large Flowered Honeysuckle is a truly magnificent shrub. The large flowers are very sweet scented. Grows about ten feet in height.

Quality	Height	Each	10	100
TTT	2 to 3 ft.	\$1.00	\$7.50	

Philadelphus Coronarius SWEET MOCKORANGE

This old familiar shrub is loved by all. It grows to about twelve feet high, and has fragrant white flowers.

Quality	Height	Each	10	100
TTT	2 to 3 ft.	\$0.75	\$6.00	\$50.00

Rosa Rugosa RUGOSA ROSE

The most beautiful and healthy of the rugosa roses. The dense foliage borne on thorny stems makes this an excellent hedge plant. Illustrated above, right.

Quality	Height	Each	10	100
3-year		\$1.00	\$8.50	

Rosa Rubiginosa SWEETBRIER ROSE

This handsome, hardy rose has bright green foliage which exhales a very agreeable aromatic odor. Use in the hedge or lawn border.

Quality	Height	Each	10	100
T	8 to 12 in.	\$0.75	\$5.00	

Rosa Rugosa Rubra RED JAPANESE ROSE

Very like the Rugosa above, the Red Japanese Rose is distinguished by its darker toned flowers.

Quality	Height	Each	10	100
TTT	2 to 3 ft.	\$1.00	\$7.50	\$60.00

Spiraea Bumalda ANTHONY WATERER SPIREA

An especially desirable shrub for its two outstanding qualities,—low-growing, and late-blooming. It seldom grows more than two feet high and has bright crimson flowers in July. Plant it in the foreground, in the border and along paths.

Quality	Height	Each	10	100
TTT	18 to 24 in.	\$1.00	\$7.50	\$60.00

Spiraea Van Houttei VANHOUTTE SPIREA

Deserving of its extensive popularity, this beautiful shrub is literally covered with sprays of pure white flowers. See picture above.

Quality	Height	Each	10	100
TTT	2 to 3 ft.	\$0.75	\$6.00	\$50.00

Little Tree Farms Products Please!

"I wish to acknowledge receipt of my order from Little Tree Farms, and to say that I am greatly pleased with everything. They just fill in very nicely a little corner which I had planned for, and I shall certainly send to you when I wish to replace shrubs which have outgrown their beauty or usefulness."

"My order of shrubbery came through all right, and they were very nice and I am well pleased with them."

Strong, well-branched Little Tree Farms Hydrangea

Symphoricarpos Racemosus SNOWBERRY

This small shrub bears little clusters of pinkish flowers in spring. In autumn it is laden with large, waxy white berries.

Quality	Height	Each	10	100
TTT	2 to 3 ft.	\$0.75	\$6.00	\$50.00

Symphoricarpos Vulgaris CORALBERRY

A perfect companion for the Snowberry with its strikingly-strung beads of deep rose color.

Quality	Height	Each	10	100
TTT	2 to 3 ft.	\$0.75	\$6.00	\$50.00

Syringa Vulgaris COMMON LILAC

The familiar old-fashioned Lilac for which there is no substitute, has very large fragrant flower masses of sweet lavender tones.

Quality	Height	Each	10	100
TT	2 to 3 ft.	\$1.00	\$8.00	

Syringa Vulgaris Alba COMMON WHITE LILAC

Combined with the Purple Lilac this choice variety makes a most charming and delightful effect in the garden or on the lawn.

Quality	Height	Each	10	100
TT	2 to 3 ft.	\$1.00	\$8.00	

Viburnum Dentatum ARROWWOOD

In spring it is covered with large flat sprays of creamy flowers and in winter it is a mass of blue-black berries. It grows vigorously to a height of fifteen feet.

Quality	Height	Each	10	100
TT	18 to 24 in.	\$0.75	\$6.00	\$50.00

Viburnum Opulus Sterile COMMON SNOWBALL

The large rounded balls of snow-white flowers make this a very showy and attractive shrub, of medium height and vigorous growth.

Quality	Height	Each	10	100
TT	2 to 3 ft.	\$1.00	\$7.50	\$60.00

Weigela Eva Rathke RED WEIGELA

The weigelas are decorative shrubs of spreading habit, arching branches and rather large handsome leaves. The very showy crimson flowers of this variety appear in spring.

Quality	Height	Each	10	100
TT	2 to 2½ ft.	\$1.00	\$7.50	\$60.00

Weigela Rosea PINK WEIGELA

Very like the Red Weigela in habit of growth, its flowers are of a very beautiful rose color. It gives a charming effect alone or in groups.

Quality	Height	Each	10	100
TT	3 to 4 ft.	\$1.00	\$7.50	\$60.00

A NEW PROGRESSIVE PLAN for Decorating Your Home Grounds

The greatest values for the least money are found in the Little Tree Farms "Special Offers" made throughout this Year Book, and each "offer" is especially designed to fit some part of the home grounds (or a larger property) as it would be decorated in a good landscape plan.

Now, our Landscape Man has put together certain of these designed groups or "offers" in the new progressive plan pictured below, so that they make a complete home landscape planting. This plan gives you proper decoration for the house, the garage, the lawn, the drives, and the paths; gives you hedges and shade; protection for your garden, etc., etc. In short, you have here a charming planting plan for a moderate sized property, which you may follow as a whole or in part, using *only the special low priced offers* of this Year Book.

Each planting is indicated on the plan by a number; the number corresponds to the number of one of the special offers. In the columns at right and left, these numbers are completed by the name of the offer (as "Doorway Group," "Barberry Hedge," etc.) and by the number of the page

on which you will find the offer described and priced.

For instance, the plan shows six shade trees along the street, each numbered 36. Look in the column at right for No. 36 and see that Offer 36 is named "A Sugar Group." On page 52 you will find the offer to be six 8 to 10 ft. maples for \$10.00. You see then, that Offer No. 36 is used to plant shade trees along the whole front of the property.

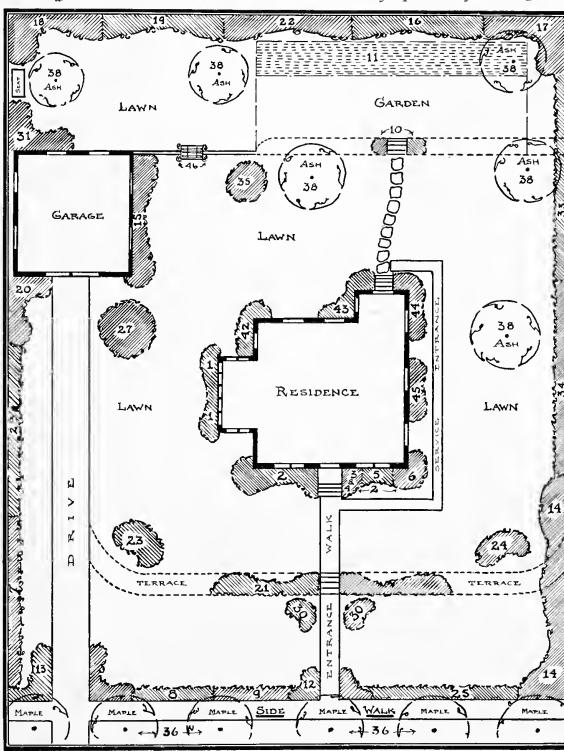

Choose as much of the landscape plan as suits your home grounds, order the offers indicated, and plant according to plan.

You can plant from time to time, as inclination and money decide, always progressing toward an attractive and harmonious result. You will thus have, at least cost, much of the pleasure in a progressive development which is enjoyed by the man who pays for a special individual design.

Little Tree Farms offers you this New Progressive Plan with best wishes for a more beautiful home and a happy planting season.

*This sectional method of home landscaping is the easiest, and most practical to follow.
Select the offers listed to make YOUR home the "beauty spot" in your neighborhood.*
